What is the **SBG Bag Label for Resellers** and what advanced functionality does it provide?

The bag label used and provided by SwissBiogas.com is designed to provide the most important information at first glance, without distracting the people handling the bags with colourful pictures and marketing texts. The information provided is:

- Logo, name (in corporate design) and contact details of the reseller
- Product name (in corporate design), including the content of the main components
- Information about handling and storage of bags and pallets
- Protective measures for workers
- Weight
- Two QR codes (optional) that allow the reseller to provide additional information they find interesting, helpful or important, in multiple languages. If not needed and requested, one or both codes can be completely removed from the label.
- The bag label does NOT contain ANY link or reference to SwissBiogas.com or their products

Detailed description of the bag label areas

- Label areas where data is inserted according to the reseller's request:
 - ① Company logo, name
 - ② Product name
 - ③ Contact data
 - ④ Pictogram descriptions: They are in English by default, but can be replaced with any other language upon request.
- Label areas where position and size of graphics/QR codes are unchangeable, but the content of the QR codes (e. g. links to web addresses) can be chosen by the reseller. We suggest to use the first code to access a document repository and the second one to link to the reseller's homepage.
 - ⑤ QR code 1: Optional, link to a document repository managed by SBG. The documents stored in the repository are provided by the reseller and can be accessed by the customers by means of the QR code OR The reseller manages an own repository and SBG creates the QR code linking to it.
 - ⑥ QR code 2: Optional, link to the reseller's homepage or any other web page of the reseller's choice.
- Label areas where position, size and content are unchangeable:
 - ⑦ 6-digit production/quality control number assigned by SBG
 - ⑧ Basic product information and pictograms for handling, storage, personal protective equipment (PPE) and weight.
