

DingoToken

Whitepaper

Dingo Token Platform

1. **Dingo Token** platform allows users to easily deposit **BEP20 TOKENS (ANY tokens)** into an **NFT** .
2. **Dingo Token** is a new protocol layer, enabling a new world for **NFT**.
3. The **NFT** Minting Station (Decentralized App - DApp) allows user to mint **NFT** s in two different ways.
4. The **DApp** which we are developing carefully will present two different options for users.

Two different options for users.

01

Standard NFT Minting

Users can mint their own **NFT** or choose to purchase others created by **Dingo Token** platform users.

02

Special NFT Minting

DINGO TOKEN

NFT Minting Station

Standart NFT Minting

User must have

Dingo Token (DINGO)

%5 burn
address

- ***Dingo XY Chromozone Token** (DgXX) is a subtoken of **Dingo Token** and **Dingo Token** universe. Users must have **DgXY** to mint "Special NFTs" is a new protocol layer, enabling a new world for **NFT**.
- * When a user wants to mint a special NFT, the NFT Minting Station DApp checks previous transactions for the wallet address.
- * If the user did not call which costs 10 million **Dingo XY** before, then system asks for it.
- * As soon as possible the transaction is completed, a transaction hash will be created and 10 Million **Dingo XY** was burned as a result of this process.
- * This transaction hash will act as genes to generate DNA code with **Dingo XX** transaction hash.

- ***Dingo XX Chromozone Token** (DgXX) is a subtoken of **Dingo Token** and **Dingo Token** universe. Users must have **DgXX** to mint "Special NFTs" is a new protocol layer, enabling a new world for **NFT**.
- * When a user wants to mint a special NFT, the NFT Minting Station DApp checks previous transactions for the wallet address.
- * If the user did not call which costs 1 **Dingo XX** before, then system asks for it.
- * As soon as possible the transaction is completed, a transaction hash will be created and 1 **Dingo XX** was burned as a result of this process.
- * This transaction hash will act as genes to generate DNA code with **Dingo XY** transaction hash.

Static Rewards, Lp Acquisition, Manual Burn

A common misconception with the heavy APY average is the subjectivity of the impermanent loss from staking an LP (liquidity provider) in a farming reward generator. With the explosion of DeFi we have seen too many new cryptocurrency prospectors get sucked into a high APY LP-farming trap, feeling hopeless as they are pushed out by earlier buyers with higher staking rewards. We've all been there, seeing those shiny 6 digit figures can be pretty damn tempting to jump in.

However, almost always the token suffers from the inevitable valuation bubble, which is then followed by the burst and the impending collapse of the price. This is why we have seen the mass adoption of static rewards, also known as reflection, a separate concept that seeks to eliminate the troubles caused by farming rewards.

Why Static?

Static rewards solve a host of problems. First, the reward amount is conditional upon the volume of the token being traded. This mechanism aims to alleviate some of the downward sell pressure put on the token caused by earlier adopters selling their tokens after farming crazy high APY's. Second, the reflect mechanism encourages holders to hang onto their tokens to garner higher kick-backs which are based upon a percentages carried out and dependant upon the total tokens held by the owner.

Manual Burns

Sometimes burns matter; sometimes they don't. A continuous burn on any one protocol can be nice in the early days, however, this means the burn cannot be finite or controlled in any way. Having burns controlled by the team and promoted based on achievements helps to keep the community rewarded and informed. The conditions of the manual burn and the amounts can be advertised and tracked.

Dingo Token aims to implement a burn strategy that is beneficial and rewarding for those engaged for the long term. Furthermore, the total number of Dingo Token burned is featured on our readout located on the website which allows for further transparency in identifying the current circulating supply at any given point of time.

Automatic Liquidity Pool (LP)

Automatic LP is the secret sauce of **DingoToken**. Here we have a function that acts as a two-fold beneficial implementation for holders.

First, the contract sucks up tokens from sellers and buyers alike, and adds them to the LP creating a solid price floor.

Second, the penalty acts as an arbitrage resistant mechanism that secures the volume of **DingoToken** as a reward for the holders. In theory, the added LP creates a stability from the supplied LP by adding the tax to the overall liquidity of the token, thus increasing the tokens overall LP and supporting the price floor of the token. This is different from the burn function of other reflection tokens which is only beneficial in the short term from the granted reduction of supply.

As the **DingoToken** token LP increases, the price stability mirrors this function with the benefit of a solid price floor and cushion for holders. The goal here is to prevent the larger dips when whales decide to sell their tokens later in the game, which keeps the price from fluctuating as much as if there was no automatic LP function.

All of this is an effort to alleviate some of the troubles we have seen with the current DeFi reflection tokens. We are confident that this model and protocol will prevail over the outdated reflection tokens for these reasons

Tokenomics

	NUMBER	SHORTHAND
Total Supply	1,000,000,000,000,000	1 Quadrillion
Burned Dev Tokens	600,000,000,000,000	600 Trillion
Liquidity Circulating	380,000,000,000,000	380 Trillion
Development	20,000,000,000,000	20 Trillion

Tokenomics

■ Development ■ Liquidity Circulating ■ Burned

Dingo Token Protocol

Dingo Token employs 3 simple functions: Reflection + LP acquisition + Burn In each trade, the transaction is taxed a 10% fee, which is split 2 ways.

- 5% fee = redistributed to all existing holders
- 5% fee is split 50/50 half of which is sold by the contract into BNB, while the other half of the DINGOTOKEN tokens are paired automatically with the previously mentioned BNB and added as a liquidity pair on Pancake Swap.

Safety

Step 1

Dev burned all tokens in Dev Wallet prior to launch

Step 2

Fair launch

Step 3

LP locked on DxLocker for 1 years

Step 4

LP generated with every trade and locked on Pancake

ROADMAP!

Dingo token Roadmap

2021 Q2

2021 Q3

2021 Q4

2022 Q1

Developing the website and communication channels such as Telegram, Twitter, Reddit.

Finishing the test stage with the contract code and deploying it on Binance Smart Chain.

Starting private sale for early adopters.

Launching on PancakeSwap with locked liquidity.

Submitting details for exchange listing

Launching NFT Mining Station DApp.

Adding more exchange listings.

Starting NFT Mining Station DApp bounty program.

iOS app early beta, (wallet + earning Dingo with gaming)

Creating an NFT marketplace with BakerySwap. (only for NFTs minted on Dingo Token)

Starting the tests for NFT launchpad on Dingo Token platform.

Updating regular burn program.

Finishing the test stage for NFT launchpad project on Dingo Token platform.

Announcing the world's first NFT launchpad + Mining Station DApp.
