

Jett Plasma Medical is a remarkably interesting device to treat dry eye disease secondary to blepharitis, punctal obstruction and imperforate lacrimal punctum, trichiasis, ectropion, fibroma, angioma etc. in Veterinary Ophthalmology.

Thanks to the exclusive patented Direct Current technology, JETT PLASMA MEDICAL allows you to achieve long-lasting effects without risk. JETT PLASMA MEDICAL has a great advantage which is the highest precision of discharge focus, which leads to fast and efficient healing after treatment. JETT PLASMA MEDICAL is supplied with Golden applicators for minimally invasive procedure and Silver applicator for non ablative procedure (Dry Eye Secondary to Blepharitis).

JETT Plasma is the only direct current plasma device in the world. This makes it the most stable and accurate device on the market. The precision offered by JETT Plasma has opened the treatment uses available with the device to new medical veterinary areas. The Jett Plasma device is versatile, lightweight, comfortable to wear due to its compact size, and most importantly, it delivers great results.
