

Proposed Cell Tower at Strandherd & Woodroffe Across From Movati Adjacent to Nepean Woods

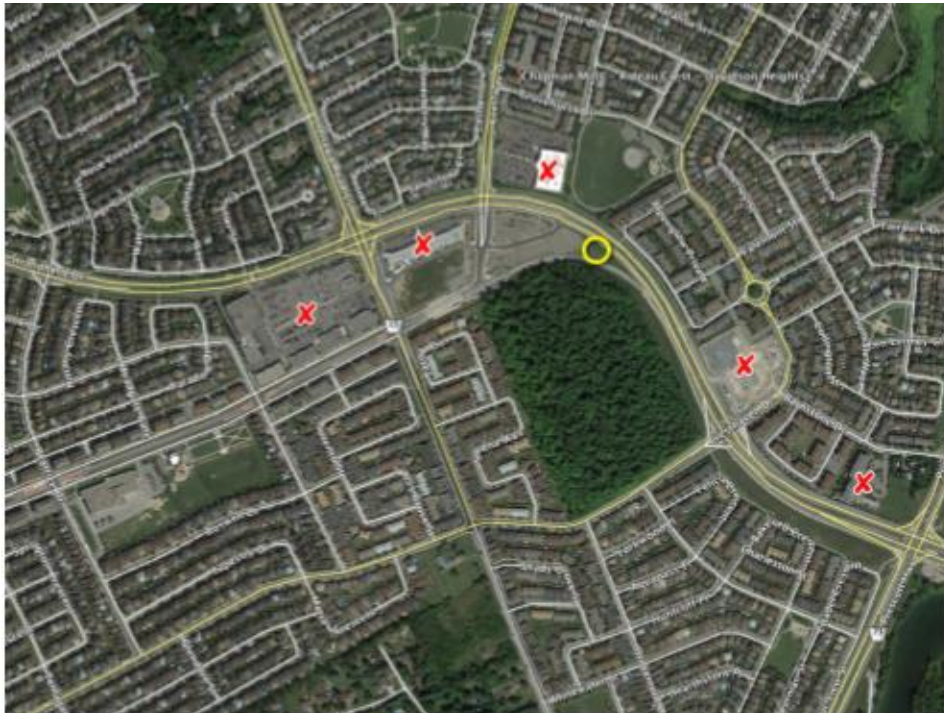

Important Information

The property is currently used as a Park-N-Ride facility. Rogers proposes placing the tower on the undeveloped eastern-most section of the property. Achieving the desired 40m height will permit other carriers to co-locate on the tower, reducing the need for additional towers in the area.

The area circled on the map below identifies the potential location for a shrouded 40m white monopole.

The Xs below identify properties that have been ruled out for reasons including:

A lack of available space; a lack of willingness from the property owner to pursue a tower on their property; properties being too close to residential development; and properties sitting too far outside of the search area to adequately meet the coverage objectives.

Final approval for the siting and design of an Antenna System and an RUAS rests with Industry Canada.

Health issues associated with Antenna Systems and RUAS are regulated by Industry Canada and Health Canada. Information concerning this topic can be found on Health Canada's website.

Here is a view of the property from Strandherd Dr., looking east with the approximate height and location of the tower identified:
