

To build a turn by turn ride to be used on the 5, 6 and 6.5 inch gps using the Polaris Ride Command application

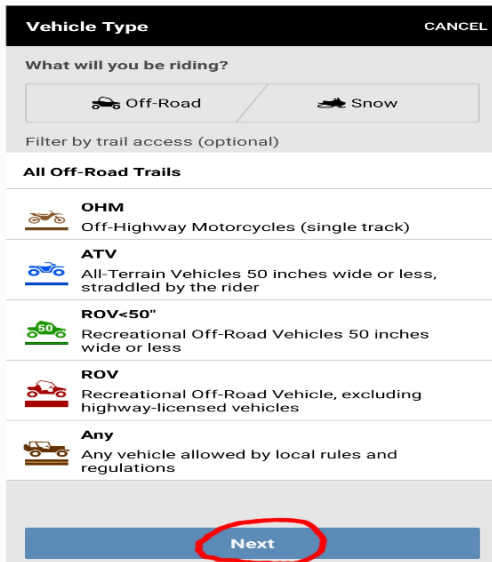

1. Open the Polaris Ride Command application on your smart phone device or tablet (if you don't have a smart phone device or tablet you can build a ride on the Polaris Ride Command website on your computer)
2. Sign in or create an account
3. On the map screen select tools

4. Select plan a ride

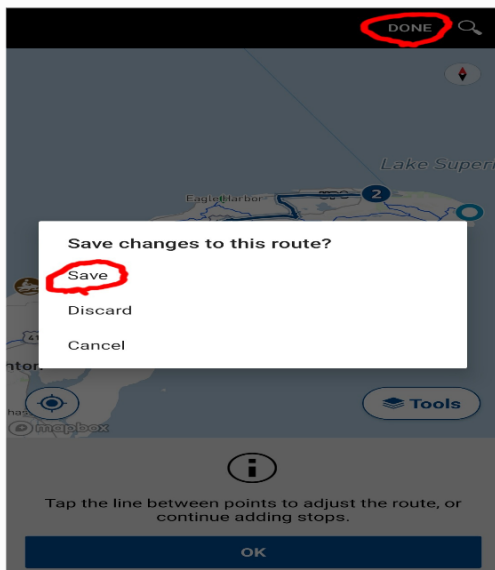

5. Choose what you will riding and then select next

6. Now follow the on screen directions to enter your starting point and destination point

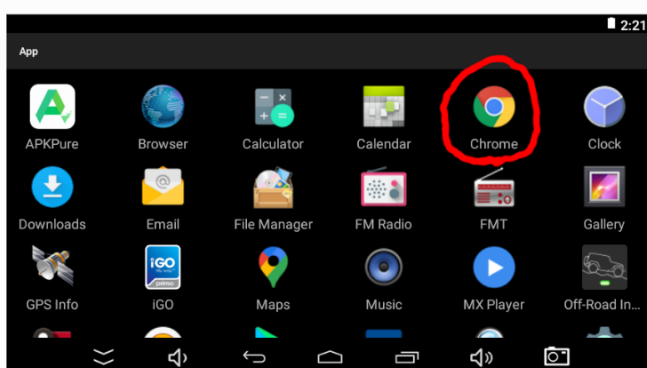

7. When finished planning your ride select done and then select save

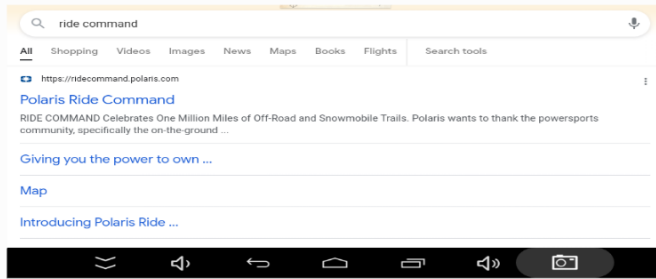

8. You are now finished building your ride in the Polaris Ride Command application

9. Now power on your gps device and connect it to wifi

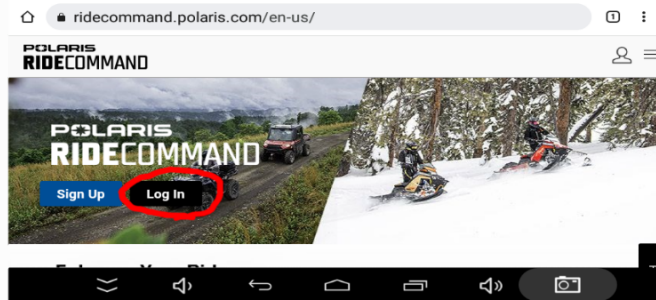

10. Select the Google Chrome application

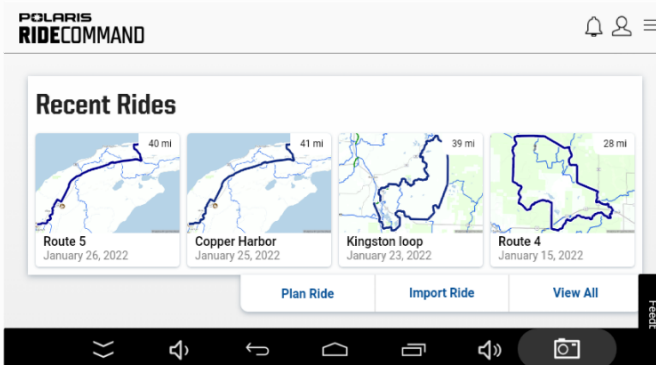

11. Type Ride Command in the search bar and select the website

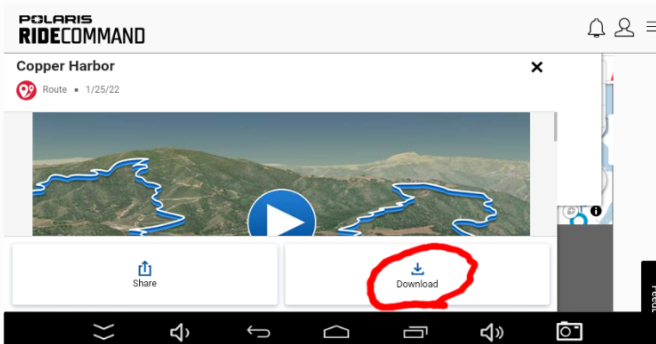

12. Log in on the Polaris Ride Command website

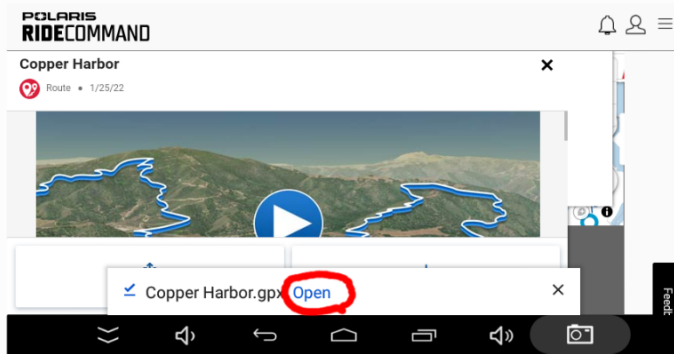

13. Scroll down until you see recent rides and select the ride that you just created and saved in the Polaris Ride Command app

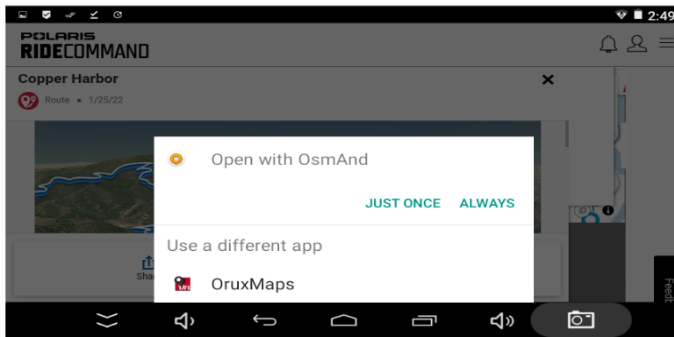

14. Select download

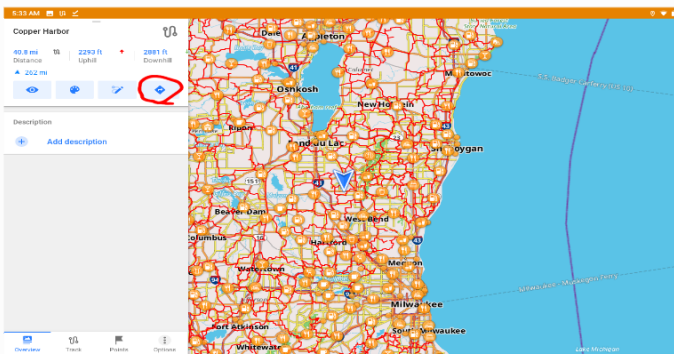

15. Select open

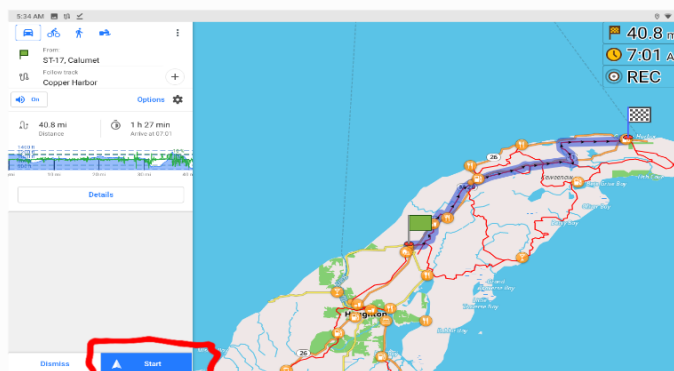

16. Select open with OsmAnd just once

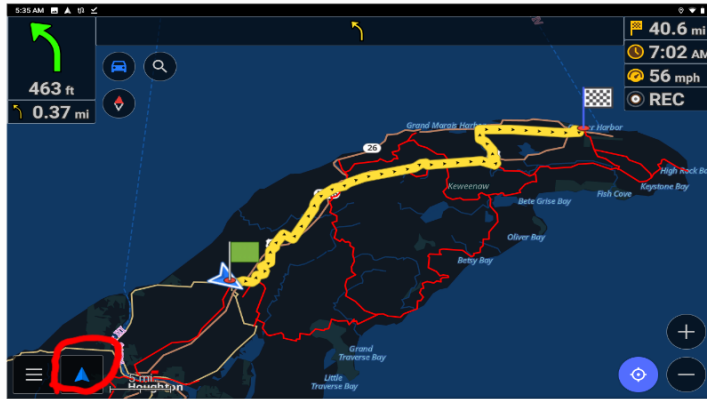

17. Select navigate

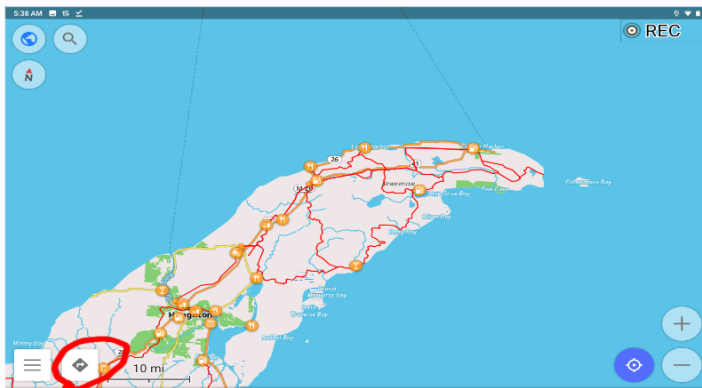

18. Select start.

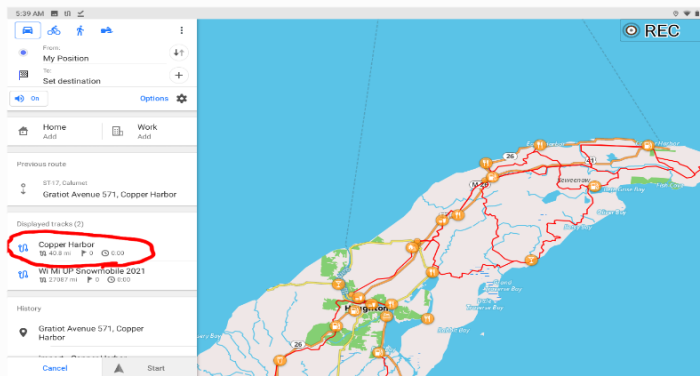

19. To stop the navigation select the bottom left navigation arrow then select dismiss

20. To reselect a past ride select the navigation icon in the bottom left

21. Find your past ride name and select it

22. All downloaded rides will be located in the import folder in the tracks menu
