

## Spend + Payment Intelligence Engine

Most organisations spend months fixing data before they trust insight. SPIE starts with insight — and shows you what's worth fixing.

### What SPIE is

**SPIE (Spend + Payment Intelligence Engine)** is a decision-intelligence tool that helps leaders see what is really happening across purchasing, payment, and supplier behaviour.

It works with real-world data to surface decision-grade insight quickly — and shows where improving data would genuinely change outcomes.

### The problems SPIE solves

Most leaders recognise these conversations:

- *"We don't trust the data enough to act on this."*
- *"By the time the report's ready, the decision's already been made."*
- *"We're fixing data everywhere, but I'm not sure what actually matters."*
- *"We can see spend — but not risk, behaviour, or what's changing."*

SPIE exists to move organisations from **data debate** to **decision confidence**.

### Who is SPIE for?

SPIE is designed for organisations where complexity gets in the way of clarity.

- £25m–£1bn organisations with multi-supplier environments
- Project-led or operationally complex businesses
- International or fragmented purchasing and payment data
- Finance, P2P, AP, or transformation leaders under pressure to explain "what's actually going on"

**If this sounds like you**, SPIE was built for exactly that reality.

**SPIE — Decision-grade insight from purchase to payment**
