

Fifteenth Biennial Report
of the
**FISH and GAME
WARDEN**

of the
STATE OF IDAHO
1933-1934

AMOS H. ECKERT
State Game Warden

Forestry

TO HIS EXCELLENCY, C. BEN ROSS,

Governor, and the members of the
Twenty-third session of the Legis-
lature of the State of Idaho:

GENTLEMEN:

In accordance with the provisions of law,
I have the honor and pleasure to submit
herewith the Biennial Report of the Depart-
ment of Fish and Game for the years 1933
and 1934.

This report contains a resume of the ac-
tivities of the department during the bien-
nium ending December 15, 1934, and pre-
sents in detail the accomplishments of the
various officials, new construction work and
costs, tabulation of fish and game licenses
issued during the biennium and a tabulated
statement of the receipts of the department
with classification of disbursements.

Respectfully submitted,

AMOS H. ECKERT,
State Game Warden.

Fredly
St.
4-4-39

FISH AND GAME DEPARTMENT

Game WardenAmos H. Eckert
Fish CommissionerClaud C. Drake
Chief ClerkLucile V. Bailey
Asst. ClerkArlene Wells
Asst. ClerkCarolyn Hunt

The State Fish and Game Department has general supervision over the protection of all fish and game, and the Warden is required by law to devote his entire time to such supervision as an active executive officer, and shall at all times take the field in person in the performance of his duties, when possible.

For administrative purposes the state is at present divided into eight districts, each under the supervision of a chief deputy game warden, with the exception of one, which is in charge of the head of the department. During the open season each of the forty-four counties of the state is under the jurisdiction of a deputy game warden, whose duty it is to patrol all streams and the field to prevent violations of the fish and game laws.

There are thirty-three regular deputies in the various counties and a number of honorary commissions have been issued to responsible sportsmen who have assisted materially in securing information on law violations and which is much appreciated by the department.

There are eleven fish hatcheries in the state, all but three operating the year around, and employing twelve men, superintendents and assistants, full or part time.

Payments were completed on the Jerome Game Farm in 1934 and this year there was a 150 foot holding pen constructed and the entire property was fenced with woven wire. Arrangements are being made for construction of buildings. Blue prints are already drawn and we expect work to be under way in the spring to complete this auxiliary game farm, which will serve for distribution of game birds in the thirty-four southern counties. Lapwai Game Farm will continue to supply the ten northern counties.

Amendments to the game laws at the last session of the legislature, which included the requirement that all vendors of game licenses be bonded, has doubled the office work, since there are some seven hundred vendors' accounts to be kept, in comparison with forty-five when handled by the deputy game wardens. The vendors are required by law to remit monthly and the necessity for mailing licenses and game tags directly from this office throughout the year, instead of being sent at the beginning of the season to the deputies for distribution, has made necessary an additional Assistant Clerk in the office. Dealing directly with the vendors has also increased the correspondence and the cost of office administration.

REPORT OF THE WARDEN

Undoubtedly the most important phase of the future program for the Idaho Fish and Game department will be game management. As appended reports will show, the problem of propagating and planting fish and game birds is being worked out in a most satisfactory manner from the viewpoint of the sportsmen and the department, but while some progress has been made through amendments to laws, at the last session of the legislature, to control big game on closed areas by special permits to hunt on a limited license plan, the real problem at this time is to increase the feed reserve.

We are unalterably opposed to regulation G-20-A whereby the Secretary of Agriculture seeks to turn over game administration to the United States Forest Service. Since American colonies were established the English common law to the effect that the king owned all game in trust for the people, has been accepted in America with the qualification that all rights to ownership in game is invested in the sovereign states, title acquired by common law, and that no federal statute is necessary to hold that right. We recommend that the legislature go on record as favoring supervision of the game in Idaho by this department as representative of the sportsmen.

WINTER RANGE CONDITIONS

In connection with this recommendation we wish to further this program by seeking improvement of winter range conditions for big game, to be given consideration over domestic animals for grazing privileges on the public domain as well as the forest reserve. At the present time game is protected from hunters on the various preserves but there are non-grazing areas established for their benefit. It is our opinion that all our game preserves and not less than 10 percent of all other grazing lands should be set aside for feed reserves and propagation of big game.

One hundred and fifty bull elk, two points or more, were taken under the special license plan on the Pocatello reserve in 1933, as provided by section 35-2203 of the Idaho Code Annotated, thereby relieving herd congestion, the increase

having reached such proportions under the protection of the state that farmers in the vicinity complained of damage to property. This department was forced to provide special range riders to keep the elk on the preserve. This was also true of the antelope in Central Idaho where 69 bucks, two points or more, were taken under the same provision in 1934. The present plan of the department is to scatter these herds, where they are propagating too rapidly to be handled in one vicinity, to other sections of the state adapted, from a range and feed standpoint, to their needs for a habitat.

CONSERVATION PROGRAM

We join with the Western Association of Game and Fish Commissions, and the American Game Association in urging that essential wildlife areas be established before grazing districts are set aside. We will be represented at the meeting of the commissioners in Denver prior to the annual American Game conference, scheduled to be held in New York City, to discuss with Mr. F. R. Carpenter, grazing director, the opportunity to establish such areas under the Taylor bill.

I have also addressed a communication to the Honorable Harold L. Ickes, Secretary of the Interior, Washington, D. C., urging consideration of the Western association's feed conservation projects.

On September 16, 1934, a meeting with Dr. R. E. Willard, chairman of the Land Use Committee for the northwestern States who had the apportioning of monies under federal appropriation for the conservation programs in Oregon, Washington and Idaho, was held, R. H. Rutledge, regional supervisor of the U. S. National Forest, Ogden, Utah; his assistant, Orange Olsen; H. A. Vogel, Idaho State Planning board; T. B. Murray, director of the U. S. Biological survey, game management; and N. S. Wight, secretary of the rural rehabilitation corporation being present. This department's special investigator, Felix A. Plastino, who spent two months and at a cost of approximately one thousand dollars, presented data collected for six new grazing areas and bird refuges to benefit under this federal appropriation, to Dr. Willard. At that time the Boise-Payette projects were combined as one and received the tentative endorsement of Dr. Willard, but to date no assistance has been rendered from his office.

The other projects were the securing of additional lands for the protection of big game and upland game birds, es-

pecially grouse, to be known as the Caribou and the Pocatello projects as well as the Sand, Grays and Mud Lake proposed bird refuges in Jefferson County, and the Cabarton project on the North Fork of the Payette river.

NEW PROJECTS OUTLINED

According to Dr. Willard at the time of the conference he had a \$2,500,000 purchase fund to work from in the four northwestern states, and stated that buying of land for game preserves was a legitimate use in Idaho. He stated that the migratory bird refuges were excluded from consideration since this was to be taken over by the U. S. Biological Survey to be financed by the duck stamp proceeds. There were to be two definite objectives, he said, in this submarginal purchase program, consideration of the ultimate use of the land and rehabilitation of families on relief.

After submitting more complete data and maps to Dr. Willard this department recently received a letter from him which was not encouraging in consideration of the time and money spent in outlining these projects and this department's continued reiteration that Idaho should benefit under this federal appropriation to the same extent as other northwestern states. We have addressed letters to Senators Borah and Pope as well as our representatives in congress asking them to use their influence in getting these projects started.

We quote from Dr. Willard's letter of December 19th as follows: "Recently we have had several conversations with Dana Parkinson and others with respect to the Boise-Payette matter, and Mr. Parkinson and Mr. Vogel have outlined on blue print maps the location of certain tracts that possibly might be handled under the submarginal purchase program. Note that I say *might* be handled. In view of the possible arrangement that it seems possible to make whereby the Forest Service would detail men to handle this matter, I am willing to submit a project for the opinion of the people in Washington, D. C., with the recommendation that if it is found to be within the possibilities of the submarginal land purchase program that the project be put into operation.

"The map that you originally submitted in triplicate showing the general purchase area and general location of the Boise and Payette purchase area will be satisfactory with a little fixing.

"As soon as you can arrange to get these maps prepared, if you will return the six copies here we then will prepare the original proposal or report, budget, etc., in accordance with such arrangements as we can make with the Forest Service for doing this job. The acreage involved is too small to justify putting on a man as project manager."

Regulation G-20-A Published by H. A. Wallace, Secretary of Agriculture:

"When the Secretary shall determine upon consideration of data and recommendation of the Forester that the regulation or the prohibition for a specified period of hunting and fishing upon any National Forest or portion thereof is necessary for the accomplishment of the purposes above set forth, he shall designate such National Forest or portion thereof, establish hunting and fishing seasons therefor, fix bag and creek limits, specify the sex of animals to be killed, fix the fees to be paid for permits, designate the authorized official to whom application for permit shall be made, and describe the terms and conditions under which hunting and fishing shall be conducted with a view of carrying out the purpose of this regulation. Public notice of such designation shall be given by such means as the Forester shall deem adequate for the purpose. Carcasses of animals or fish taken under permit shall be marked or tagged for identification as directed by the Forester."

SALTING PROGRAM

The past three years considerable attention to the salting program for game has been given by me and with the assistance of the chief deputies approximately 100 tons of salt have been scattered in 1934 alone. Old salt licks have been abandoned, new ones created, thereby decreasing chances of communicating herd diseases.

WINTER FEEDING

While the mild winter made unnecessary the feeding of big game and birds to any great extent in 1933-34, the department has purchased 205 tons of hay in anticipation of a cold season, 1934-35 to augment the feed on the winter ranges. Supplies purchased in the fall of 1933 and unused are also available.

INCREASE IN BIG GAME

A complete check of game by me during the past year has revealed that an estimate of 75,000 deer; 16,000 elk; 4,000 goat; 2,000 mountain sheep and 10,500 antelope in Idaho is not too large. Of this number of antelope 6,000 may be found in the Pahsimeroi Valley and the Lost river country, and 4,500 in Owyhee county.

The kill of big game during the 1934 season approximates 20,000. With the inclusion of the kill this would bring the total to 129,000. I consider 140,000 the basic number for brood stock plus the increase in kill.

$$107,500 + 20,000 = 127,500$$

CALF CROP INCREASED

The combination of the salting and feeding program, and the game management projects has, in my estimation, proved of inestimable benefit. Proper salting keeps the big game in fine physical condition at the mating season and has insured a much heavier calf crop the past three years, the estimated gain being three hundred percent.

Both upland and lowland game birds have increased in large numbers during the two recent open weather winters and in 1934 sportsmen reported seeing more game and birds than in any previous season during the past decade.

Big game is in fine shape and I expect a very small winter loss. We are now investigating conditions in the Selway, denuded by forest fires this summer, and other sections as to the necessity of beginning a feeding program.

GAME FARM REPORT FOR THE SEASON OF 1933

Jas. Marshall Superintendent

PHEASANTS

Breeding Stock Carried.....	Eggs Set on Farm.....
Ringneck 485	Ringneck 6,417
Mutant 101	Mutant 2,666
586	9,083
Eggs Shipped.....	8,370
Total Eggs used for propagation.....	11,749

Number of eggs set on the farm represents only 16 eggs per breeding hen. No eggs were set after the month of May and all two year old breeders were planted the end of May.

This farm, because of two local conditions, the excessive hot summers and the lack of adequate rearing field space, requires early eggs in large numbers and to get these eggs it is necessary for us to carry a larger number of breeding hens than would be necessary under normal conditions.

A battery of six additional chukar and quail water heated brooders were built. Outside pens were added to the north side of the pheasant brooders with extensions into the holding pens on both sides. Four new pens were built for the smaller game birds. Minor improvements and much repair work was done.

PHEASANTS PRODUCED

Pheasants Shipped.....	Pheasants Shipped.....

QUAIL

Northern Bob White Shipped..... 219

The excessive hot weather in the beginning of May cut heavily into the laying average of the breeders and also had a very bad effect on the fertility of the eggs. This is shown by the fact that we were only able to place in the brooders and the rearing fields, 5,911 chicks out of 9,548 eggs set in the incubators and under chickens, a loss of 38%. The number of birds shipped however, show that 85% of the pheasants hatched were actually raised and shipped.

Considerable progress was made this year in the artificial brooding of pheasants. In the first hatching run through the brooders we were able to turn into the holding pens, at the age of six weeks, 87% of the pheasants placed in the brooders and these birds were well feathered and in excellent condition. Alterations made in the brooder house, lower temperatures, and change of ration and method of feeding were mainly responsible for the brooder success.

No Chuker partridges were raised this year, the policy of the Department being to check on the birds already planted and so determine whether or not they are able to establish and reproduce themselves before going to any further expense with their propagation.

A number of improvements and considerable repair work was done during the year. Two large new type, open top and vermin proof pens were built, new fencing erected around the rearing fields and the west side fence made vermin proof. A number of wire bottom, detachable, movable quail breeding pens were made and all buildings were repainted.

REPORT OF FISH COMMISSIONER

In line with the plan adopted by the department for the development of fish propagation and distribution in the state a good many things have been accomplished to date. Among them are the following:

ASHTON HATCHERY

Construction of three check dams to enlarge brood ponds.

AMERICAN FALLS HATCHERY

Purchase of land, construction of hatchery, assistant's dwelling, standard concrete rearing ponds, roadway and culverts, development of a water supply for hatchery and ponds, dredging of the creek and walling of its banks and the blasting of a channel from the creek mouth to the middle of Snake river for the purpose of attracting spawners to this creek for egg taking. Eggs from early spawning of rainbow trout were acquired from the Federal Bureau of Fisheries in Missouri which have developed into early spawners in these waters. This is the first time in the history of the department that we have been able to take November eggs and it is hoped that we can develop this type of spawners at this hatchery in sufficient numbers to supply many of the State hatcheries with early eggs thus increasing their output capacity.

COEUR D' ALENE HATCHERY

Repaired hatchery and water system and installed permanent fish trap in Wolf Lodge Creek.

EVERGREEN HATCHERY

Enlarging hatchery and dwelling and improved water supply for hatchery and new standard concrete rearing ponds.

FERNWOOD STATION

Constructed a number of natural rearing ponds and developed roadway to same.

HAY SPUR HATCHERY

Developed water supply by changing channel of Loving Creek. Established natural rearing ponds for brood fish by the construction of two permanent fish racks and traps combined in Loving Creek, one in Silver Creek and one in Wood river near Stanton crossing.

HENRY'S LAKE EYEING STATION

Improved grounds and dwelling and constructed permanent fish trap in Targhee Creek.

MACKAY HATCHERY

Constructed new standard concrete rearing ponds and check dam and made other minor improvements.

SANDPOINT HATCHERY

Enlarged dwelling, improved hatchery grounds and rearing ponds. Also increased amount of equipment necessary for hatching lake whitefish and established permanent fish traps in Grouse creek and Granite creek.

TWIN FALLS HATCHERY

Enlarged dwelling and hatchery, supplied hatchery with modern equipment, leveled grounds and improved roadway. Also constructed standard concrete rearing ponds.

WILLIAM'S LAKE STATION AND SALMON CITY HATCHERY

Developed hatchery water supply, added hatchery troughs at William's Lake egg-taking station.

RUBY CREEK STATION

Remodeled old rearing ponds and check dam and constructed new natural ponds.

IMPROVEMENTS CONTEMPLATED

The completion of the adopted plan visualized the following improvements at the various hatcheries and stations as listed on next page:

ASHTON HATCHERY

Additional standard concrete rearing ponds and a gravel roadway from the highway to the hatchery.

COEUR D' ALENE HATCHERY

Construction of additional rearing ponds and a garage.

FERNWOOD STATION

Construction of dwelling for caretaker and additional natural rearing ponds.

HAY SPUR HATCHERY

Moving of entire plant to better location for water supply. This relocation includes moving the hatchery and other buildings. Construction of new standard concrete rearing ponds and circular ponds. Grading and leveling of grounds and landscaping.

MACKAY HATCHERY

Construction of new hatchery building relocated. Moving and enlarging dwelling, construct additional circular concrete rearing ponds and improve grounds.

RUBY CREEK STATION

Construct circular concrete rearing ponds.

SANDPOINT HATCHERY

Provide additional hatching equipment for lake whitefish.

**WILLIAM'S LAKE STATION AND
SALMON CITY HATCHERY**

Construct additional standard concrete rearing ponds and inside cement tanks. Also construct building for eyeing station and spawn-taking and permanent fish trap at head of lake.

In addition to the above, the department plans to do everything possible to induce the construction of a Federal Fish Hatchery and ponds in northern Idaho and at Big Springs. While these have not yet been constructed, Fred J.

Foster, District Supervisor of the Bureau of Fisheries, has continued his high standard of cooperation. J. R. Russell, Superintendent of the Hagerman Federal Hatchery, and his force have also cooperated to the fullest extent, and we hope this cooperation continues.

The department further hopes to develop and propagate species of fish suitable for the large lakes in Northern Idaho which can be adapted to commercial fishing.

The completion of so large a part of the approved program made it possible to increase the output of the various hatcheries as indicated by the comparative statement for the years 1929-1934 inclusive, herein contained. This statement also indicated a material reduction in the cost of propagation and distribution of fish in spite of the fact that fish have been consistently grown to a larger size before liberating. A large part of this reduction in cost can be credited to the hearty cooperation of the department employees and to the cooperation of the forest service in fish distribution. The Federal Relief Administration also materially assisted in furthering the construction program by furnishing labor during the past year and part of the fish food during the past three months.
