Sixteenth Biennial Report
of the
FISH and GAME
WARDEN

of the
STATE OF IDAHO

1935-1936

AMOS H. ECKERT
State Game Warden

TO HIS EXCELLENCY, C. BEN ROSS,

Governor, and the members of the
Twenty-fourth session of the Legis-
lature of the State of Idaho:

GENTLEMEN:

In accordance with the provisions of the law, I have the honor and pleasure to submit herewith the Biennial Report of the Department of Fish and Game for the years 1935 and 1936.

This report contains a resume of the activities of the department during the biennium ending December 15, 1936, and presents in detail the accomplishments of the various officials, new construction work and costs, tabulation of fish and game licenses issued during the biennium and a tabulated statement of the receipts of the department with classification of disbursements.

Respectfully submitted,

AMOS H. ECKERT,
State Game Warden.

GAME WARDEN'S REPORT

Though still faced with the necessity for solving numerous problems in game management, I am pleased to report some very satisfactory progress as the result of amendments to the fish and game laws of the last session of the legislature, under which game control is gradually becoming a reality through the cooperation of all federal and state agencies in this very important phase of our program.

Too much stress cannot be placed on the necessity for an educational program for the future which will include courses in game management in universities and colleges, training of younger students in wild life problems and a supervised study of piscatorial and faunal diseases by game staff members in all its branches. A further study of soil erosion and pollution of waters which have an important bearing on forage, and stream vegetation, are also serious items for consideration in our conservation program.

BIENNIAL ACCOMPLISHMENTS

To present a true picture of the accomplishments to date, and those contemplated, it will be necessary to briefly outline the work of completion, or near completion of all projects to enlarge the facilities of hatcheries and game farms to include remodeling and renovation of old and erection of new establishments. This has been done with the aid of the Federal Works Progress Administration allotment of materials and labor and state game department funds. The gradual increase in receipts since 1934, following a stringent reduction of operation costs during the depression years, has made such developments possible.

This increase in earnings has brought the department's fund back to normal despite the increase in expenditures in 1936 which were necessary in order to take advantage of the W.P.A. aid, and the year closes with a healthy balance in the game fund, more than double the amount left to its credit when the present department administration took office. Decrease in expenditures from 1932 to 1935 has not only made the present improvement program possible but has paved the way for completion of all projects now underway.

IMPORTANT INDUSTRY

The fish and game industry is one of the most important in the state since it puts into circulation, directly or indirectly, approximately \$2,000,000 per year, through purchase of licenses, permits and

fishing and hunting tackle, paraphernalia and supplies to sportsmen and tourists. The operating cost is around \$200,000 per year and pays dividends of one thousand per cent. The benefit to the public is not entirely monetary since the sport and recreational returns are not to be discounted.

One hundred and twenty-five tons of salt have been distributed this year for the continuation of old, and establishment of new licks for game and is a continuation of a program inaugurated four years ago when additional licks were located high on the summer range as a protective measure against diseases.

PROTECT BEAVER

Contrary to the belief of some laymen the department does not encourage the killing of beaver except where animals are doing damage to agricultural interests. Wherever possible the beaver are removed alive and transplanted, the department having a working agreement with the United States Biological Survey whereby, on the Warden's recommendation, they are trapped and removed to property of ranchers who welcome the additional impounding of water which results. Dams built by beaver are also a source of benefit, their efforts creating natural rearing ponds for fish, and checking water where stream improvement is contemplated.

The new game farm at Jerome is completed and will be ready for spring operation with a producing capacity of 9,000, which will take care of the planting program for the thirty-four southern counties. The Lapwai game farm improvements include increased capacity and will continue to serve the northern counties. The brood stock has already been purchased for Jerome. Several new hatcheries will be completed for spring operation and enlargement of others has already been accomplished.

With an increased capacity in all hatcheries and game farms and the need for utilization of all new and additional facilities, a supplemental budget will be necessary for the 1937-38 biennium. This is particularly true in so far as salaries are concerned as more employees will be needed to assist with the department's development, as well as extra help allowance for completion of W.P.A. projects. The fish food and storage bills will necessarily have to be doubled with other items in keeping with the new hatching and propagation program.

SUPPLIES DISTRIBUTED

With the cooperation of the Forest Service the department has completed salt distribution, delivery of winter forage for game and plantings of fish in isolated areas and the officials take this opportunity to express their gratitude to the supervisors and rangers as well as to all other state and federal agencies which have been helpful in other phases of its program, particularly the special hunts. Five of these were held in 1936 and four in 1935, operating under Section 35-2203, Idaho Code Annotated, for the thinning and scattering of herds for a two fold purpose, to drive the game back onto their natural range as protection to agricultural interests, and to

improve the herds. Only buck deer and antelope and bull elk were taken.

The special hunt legislation should be adjusted to prevent commercialization of permits. Under the present law they are transferable without any restrictions. The law should be specific in preventing hunters from taking advantage of privileges extended by the department and should require that such transfers be made only through the office of this department.

INCREASE IN BIG GAME

Game census reports resulting from personal observation with forest officials will show the following approximate numbers of the various species, a large increase over the last biennial report: Deer, 125,000; elk, 25,000; mountain goat, 4,000; mountain sheep, 2,000; antelope, 10,500; moose, 1,000.

TAKE PREDATORS

Idaho compiled statutes requires that at least \$6,000 a year be transferred from the game fund to the predatory animal fund for extermination of pests and predators, including animals, birds and fish. During the past biennium \$12,302.00 has been spent for this purpose which includes ammunitions purchased in cooperation with sportsmen's organized drives, the dynamiting of crow and magpie rookeries, and bounties paid on cougar and predatory birds. The department pays fifty percent of salaries of predator hunters assigned to the U. S. Biological Survey during three or four months of the winter period when the snow is deep enough to make their trapping and hunting feasible. One predatory animal hunter is on the department payroll the year around.

EXEMPT AGED

Under the provision passed at the 1934 session of the legislature whereby all residents over seventy and Spanish and Civil war veterans are exempt from purchase of fish and game licenses, special permits have been issued through this office, 1,261 in 1935 and 1,010 in 1936. For the purpose of keeping a permanent record and as a protection to the individual and deputies, the department has required that each applicant file an affidavit as to his age and residence. These permits are serially numbered and in case of loss, a duplicate is issued upon the affidavit on file.

ADVISORY BOARD

During the past year the Wildlife Conservation Advisory Committee was formed to include in its membership representatives of State Granges, cattle and sheep men's organizations, U. S. Biological Survey Game Management Division, State and Federal Land and Forest Service, State Game Department, and Idaho Wildlife Federation and U. S. Junior Chamber of Commerce, for the purpose of studying problems in connection with soil erosion, reforestation; federal and state grazing privileges, and preservation and increase

of wild-life grazing areas. In my opinion a very satisfactory program of conservation will be the result of this organization if this program is continued as outlined.

BUDGET LAW INEPT

For the first time in its self-supporting history the department has functioned on a budget since the law on special funds was enacted in 1933. The total appropriation for the biennium allowed by the legislature to carry on the fish and game program was \$423,258.48 and of this amount \$35,272.15 remained unspent when the books were closed December 15 of this year.

RECOMMENDATIONS

- 1—Educational programs in schools and colleges on game conservation and management.
- 2—Additional publicity for advertising Idaho's natural and recreational resources.
- 3—Increased plantings of fish not less than five inches in length in conjunction with additional facilities already provided, with particular attention to isolated lakes and streams.
- 4—Continued salt distribution program and feeding of game during severe winters.
- 5—Federal appropriation to augment state funds (on the same basis as for building of highways) for the purchase of nesting grounds for migratory fowl and winter range for game, and protection of watersheds. The purpose is to conserve resources for the pleasure and sport of future generations.
- 6—Continuation of the budget system for the department with the proviso that when receipts exceed anticipation and the need for additional funds is necessary, the game warden may, with the approval of the board of examiners, transfer such additional monies as are required. Such transfer to be made only when the Warden has satisfied the board of the status of the fund and the need for increased expenditures.
- 7—Planting of new species of game adaptable to forage and climatic conditions of the state and a careful study of all wildlife under the game management plan.
- 8—Appropriation for scientific study and treatment of diseases in fish and game.
- 9—The continuation of an advisory board to consider questions pertaining to fish and game industry.
- 10—That the Game Warden be authorized by the State legislature to regulate and extend seasons when it is necessary in order to conserve wild life.
- 11—Screening of all irrigation canals at diversion points.
- 12—Continuation of market roads as access to game country from Selway Falls to Moore's Creek and from Loon Creek to the Middle Fork of the Salmon River.
- 13—Protection of mountain sheep and goat from predators with particular reference to eagles.

LAPWAI GAME FARM REPORT FOR THE 1935 SEASON

JAMES MARSHALL, Supt.

Favorable weather conditions coupled with more vigorous and efficient vermin control are the primary reasons for the Lapwai Game Farm producing more pheasants than in any previous year.

6,045 pheasants were raised and the distribution of these birds is shown as follows:

Shipped to holding pens and planted	5,348
Fancy pheasants, composed principally of Reeves and held for experimental planting in the spring of 1936	52
Young breeders held for shipment to the new Jerome Game Farm	645
	6,045
Pheasant eggs shipped	1,360

BREEDING STOCK. It is very essential, if the quality of birds raised is to be maintained, that new blood be introduced to the breeding flock every two or three years, and for this purpose eggs were purchased in the east, and the stock hatched from these eggs, composed of one lot of Blackneck and one of Mongolian Ringneck first cross, will form the basis of the breeders for 1936.

MELANISTIC MUTANT. Only 450 of this species of pheasant were raised in 1935 and as it is evident after four years of plantings in various sections of the state, giving them the choice of every suitable type of habitat available, they are not reproducing and, therefore, their propagation will be discontinued.

CHUKARS. One planting of this game bird seems to be proving successful. Two or three large coveys were observed on Sweetwater Creek in Nez Perce County during the 1935 season and some have been reported in adjoining territory. This seems to be the only planting showing definite results so far.

NEW CONSRUCTION. The old exhibition pens were demolished and eighteen of the new type constructed. Additional hatching equipment was built and much repair work done.

GAME FARM REPORT FOR 1936 SEASON

JAMES MARSHALL, Superintendent

LAPWAI FARM

Eggs

Set on Farm	9,960	
Shipped	6,575	
Total Used for Propagation		16,535

Pheasants (Ring Neck)

Shipped to Holding Pens and Planted	5,450	
Young Breeders Held for Jerome	100	
Reeves and Other Fancy Varieties	22	
Total Pheasants Raised		5,572

EXPENDITURE

Maintenance	\$7,671.69	
Less Credits	247.03	
Total Maintenance		\$7,424.66
Total Construction		1,213.16

With the assistance of a \$10,000 W.P.A. project the entire farm has been reconditioned, much ground has been cleared and leveled; new buildings and equipment built and old equipment remodeled. The old pens on the west side of the farm have been demolished and five new holding pens built on fresh ground east of the creek. Thirty-seven new harem breeding pens have been constructed and the flock mating pens rebuilt. A great deal of the landscaping of the farm has been changed, a new bridge and more roads constructed and the buildings repainted.

All these improvements will make the plant easier and more economical to operate and will add considerably to the efficiency and general appearance of the farm.

In the future, the entire production of this farm will be for the use of the ten northern counties and birds will be held either at the game farm or in holding pens located in these counties until after the hunting season.

JEROME

EXPENDITURE

Maintenance	\$ 440.05	
Material and Miscellaneous Cost	\$7,641.30	
Payroll	2,826.13	
Total Construction Cost		\$10,467.43

The forty acres for this farm was purchased in the year 1931 at a cost of five thousand dollars. The final payment was made in 1935. The annual interest on the outstanding balance was paid by the Jerome Rod and Gun Club.

Under the W.P.A. project construction of the new plant commenced on the twenty-seventh of November, 1935, and should be completed early in 1937. The entire farm is laid out with a view to economical, easy operation, both as regards location of buildings and their construction. Many new features will be used and in artificial brooding and incubation the most modern equipment is being installed.

As a result of experiments carried on at the northern farm a new method of brooding quail has been devised and the department hopes that in the near future it will be able to build this equipment for the propagation of the northern Bob White.

In conjunction with the construction work at the game farms holding pens have been built at selected and suitable places in various parts of the state, their purpose being to relieve the load at the game farms so that birds may be held until after the hunting season and where the weather is severe, until spring.

No birds have been produced on this farm by breeding stock and young birds were shipped from the northern farm. Some of these birds were planted after the hunting season and the others will be held for breeders for the 1937 season by which time this new plant will be in full operation.

Both the range and artificial brooding systems will be used in propagating pheasants.

REPORT OF THE FISH COMMISSIONER

Biennium 1935-'36

It is gratifying to report the progress made in the development of the plan adopted some years ago for increasing the capacity of propagating facilities in the State of Idaho, made possible through the cooperation of the various Federal Agencies, such as the Civilian Conservation Corps, and the Works Progress Administration, together with expenditures by the State Fish and Game Department. Through this aid it has been possible to plan and in a large measure, to complete at this date, the following new Fish Hatcheries:

1. American Falls Hatchery, American Falls.
2. Eagle Hatchery, Eagle.
3. Boyd Creek Hatchery, Kooskia.
4. Sandpoint Whitefish Hatchery, Sandpoint.
5. Gold Creek Hatchery, Priest Lake.
6. Spring Creek Hatchery, Clarksfork.

The above Hatcheries are in the process of construction at the present time and will be completed in the near future. The American Falls Hatchery is now in production and its capacity is being amplified. All the others, except the Gold Creek Hatchery, are sufficiently completed to go into production during the January spawn taking season.

Two additional hatcheries, one at McCall and one at Big Springs, are planned. Construction on these two hatcheries will begin as soon as feasible in the spring.

In addition to the above new hatcheries, the following are being amplified and enlarged:

1. Mackay Hatchery, Mackay.
2. Hay Spur Hatchery, Gannett.
3. Coeur d'Alene Hatchery, Coeur d'Alene.
4. Sandpoint Trout Hatchery, Sandpoint.
5. Salmon Federal Hatchery, Salmon.
6. Hagerman Federal Hatchery, Hagerman.

Of these the Hay Spur and Mackay hatcheries are being completely reconstructed. This includes the construction of new hatcheries, rearing ponds, dwellings and all other facilities necessary. It is also planned to improve the hatcheries at Evergreen, Twin Falls, and Ashton.

The completion of this development, both proposed and in the process of construction, will bring the total number of hatcheries in the state to eighteen. Of these, Hagerman, Clarksfork and Big Springs hatcheries will be operated by the U. S. Bureau of Fisheries at no cost to the State Fish and Game Department. The Salmon

Hatchery will continue to be operated on a 50-50 basis by the Bureau of Fisheries and the State Department.

In the past the limited facilities for fish propagation have made it impossible, even by taxing them to their full capacities, to propagate sufficient fish to adequately stock the streams of the state. The addition of new hatcheries and the amplification and improvement of the old, will make it possible to double the annual output of trout and increase the Whitefish output eight times. This will, however, require additional funds to meet the added operating costs.

Anticipating the larger capacity of our propagating plant, brood stock at the operating hatcheries has been greatly increased in number and permanent spawn-taking stations established in native waters to supply the demand for spawn. This should supply sufficient plantings to meet the ever-increasing demand for fish in the multitudinous waters of the state. Recreational requirements are rapidly increasing and facilities for the utilization of our outdoors has been augmented by the Forest Service through the construction of highways, side roads and pack-trails into the back areas, so that every isolated spot is available to the recreationist.

Supplementing the added facilities, the present policy of carrying as many fish through the winter for spring planting will be continued. It has been found that fish of larger size respond more satisfactorily to liberation. This year more fish than have ever been retained are being wintered in the various hatcheries to be liberated in the spring.

Cooperation of forest officials in our planting program has exceeded that of any previous period in the game department's history, and their efficient service and interest is greatly appreciated.
