

SMART TECHNOLOGY IMPROVES HOMEOWNER AND TENANT SATISFACTION, RESULTING IN INCREASED RETENTION & REVENUE.

Surveillance

Safety is top of mind for homeowner and tenants, and our solutions protect individuals and their home. State of the art camera systems provide real time surveillance. Control who has access to camera systems with remote monitoring.

- Mitigate risk of insurance claims & vandalism
- Ensure contractor accountability
- Promote safety and security
- Provide peace of mind for homeowner & tenants

Access Control

Key-less entry devices offer increased security and an enhanced user experience. Relieve the burden of building maintenance by easily activating and deactivating access codes.

- Eliminate the need for physical keys
- Convenience for residents and their guests
- Customized and programmable access
- Coordinated with surveillance for monitoring

Video Intercom Systems

Allow residents to see and speak to visitors, and easily release the door from their surface station, landline or smart device. This versatile, easy to manage system is both economical and user-friendly. Improve the daily life of residents and increase security at point of entry.

- Improved curb appeal
- Access Control capability and time-limited visitor codes
- Weather and vandal resistant
- Visitor call logs

Senior Technology

Automating devices makes it easier and safer for seniors to manage daily activities. Examples Include: lighting control, automatic stove shut-off, voice command devices, auto shades, medication management, emergency communication and health and wellness monitoring.

Common Area Solutions

Audio visual components and high speed internet create an enhanced user experience in both interior and exterior common areas.

Automation

Remote access and management of HVAC systems, irrigation, and interior/exterior lighting can dramatically reduce energy costs and water usage.

Network Infrastructure

High-speed internet and WIFI are top of mind for residents and business owners, and is critical for enabling access, communication and surveillance systems to function effectively.
