# TOTAL CONTROL

A smart home operating system (OS) is a software platform that connects the many different types of technology in your home together to make devices easily accessible and customizable. The OS enables you and your family to control every device in your home through one easy to use application.

Control your home using touchscreen, remote, keypad, voice, and app access to seamlessly perform the whole-home automation scenes.

Designing this system during the construction phase will lower costs and allow you to tailor the home to fit your needs.

Home Security

Smart Lighting

Smart Audio

Connected Devices

OS

Smart Video

Network

Remote Access

Voice Control

OPERATING SYSTEMS INCLUDE:

Control4™

amazon alexa   Google Home   HomeKit

NOW IS THE TIME

Prewiring your home will reduce the cost and time associated with retrofitting. Once the sheetrock goes up it becomes costly to run the necessary cables. Enjoy the benefits of a move-in ready smart home that is controlled by one operating system, avoiding the use of multiple apps to control your home. Working with a dedicated Smart Homz Tech throughout the build process will ensure your smart home is custom built for your needs.

STAY IN THE KNOW

- Know when the garage or a window is left open or a door is unlocked.

- Get an alert when loved ones arrive home safely or when a package is delivered.

- Immediate notification if a pipe burst or if there is a carbon monoxide leak.

- Monitor lighting and thermostats to reduce energy costs.

Enjoy peace of mind knowing you're always connected to your home, even when you're away.

MAKE IT
SMART

During the design phase, you'll be selecting lights, thermostats, door locks, garage doors, shades and security. Working with a Smart Homz Tech will ensure that the proper equipment is specified for the build, so the chosen components will work seamlessly with the desired operating system.

Here is a sample of possibilities that a smart home can deliver:

- **Get notified if a pipe burst & remotely shut off your water.**
- **A single button press can lock the doors, arm the alarm and adjust the thermostat.**
- **One tap can dim multiple lights simultaneously to the desired setting.**
- **Exterior lights turn on at dusk and off again at sunrise.**
- **Open or close the garage, check on cameras, or let a family member or service worker into the home while away.**
- **A panic scene can turn on all of the lights inside or flash the exterior lights if an alarm is triggered.**

Smart can also be sexy.

We work with you and your Interior Designers (if you choose) to ensure the components blend seamlessly with your home decor.

ABOUT
US

Smart Homz is the premier provider of residential and commercial technology solutions. With experienced installers, dedicated account managers and outstanding customer support, we provide an elite level of service that is unparalleled in the market today.

Excellence and innovation go into every project.
