

# Equine Emergency Planner

**LOUISIANA TECH UNIVERSITY**  
*Equestrian Club*

## **Introduction**

The *Equine Emergency Planer* was created at Louisiana Tech University Department of Agricultural Sciences by students enrolled in a class concerning horse welfare during hurricanes. Horse owners have taken on the responsibility of owning and caring for their equine companion(s). It is also their responsibility to plan how to keep their animals safe during emergencies and natural disasters. This planner was created to aid owners in this aspect. With the help of the Louisiana Tech Equestrian Club, the class received various grants to have the information published for public use. This planner includes specific information on evacuating to the North Louisiana region, such as feed stores and veterinarian locations. It should be filled out, and kept in a tack room, office, trailer, vehicle, or other easy to access locations. Volunteers assisting in evacuation, sheltering, and rescue of horses should be able to access and use this information to help in emergencies.

*Failing to plan is planning to fail.*

### **Teams:**

Project Leader/ Editor- Sara Deen

Facilitator- Aleta Overby, Louisiana Tech Assistant Professor

Facilities and Preparedness- Sara Deen

Evacuation- Sara Beth Redding, and Amber Baudoin

Health and Diseases- Sara Deen

Equipment and Supplies- Jennifer Cooper

## **Insurance and Preparedness**

Insurance can be a blessing after a disaster. It is a good idea to have insurance on your trailer, barn, and even on your horses. Check with your main insurance provider to see if they can cover these other needs. Be sure to check your policy to see if it covers damage caused by natural disasters, such as flooding and wind damage. Also be sure to check what it will cover for your horse, such as if your horse would need surgery.

- ⊕ Give a copy of your plan to your parish OEP (Office of Emergency Planning), and the Louisiana Dept. of Agriculture & Forestry
- ⊕ Stay informed on Louisiana's plans for animal rescue through the Louisiana State Animal Response Team, [www.LSART.org](http://www.LSART.org)

## **Resources**

Planning ahead of time is the best way to assure your horses safety. Here are resources that you may want to contact to see about trailering and board.

- ⊕ Veterinarians
- ⊕ Universities and colleges with large animal programs
- ⊕ Race tracks
- ⊕ Show grounds/ Equestrian Centers
- ⊕ Stables
- ⊕ Fairgrounds
- ⊕ Livestock Corrals/ Sale barns
- ⊕ Extension Agents

## **Tips for Evacuating**

- ⊕ Install locks on all doors/ gates, and secure facility.
- ⊕ Let neighbors know where you are going and leave contact information.
- ⊕ Determine evacuation routes ahead of time.
- ⊕ Leave as soon as possible to avoid traffic and bad weather (especially if you will be pulling a trailer).
- ⊕ Be sure to take enough food, water, and medications to support your animals for at least 72 hours. Feed stores may not carry your brand of feed, so be sure to check ahead of time and bring enough of your own feed to switch the horse over to the new feed gradually.
- ⊕ Turn off main electric breaker and water.
- ⊕ Plan as if you will not be able to come back for at least three days.

## **What to Do if Not Evacuating**

- ⊕ Do not lock horses in stall or barn. They could be trapped if the building were to flood, have something fall on it, or collapse.
- ⊕ Have enough food and hay for 5-7 days. Store these in sealed containers or plastic bags and place as high off the ground as possible.
- ⊕ Have enough water for 5-7 days. Use large garbage cans to fill with water and cover with lid. Do not rely on automatic waterers.
- ⊕ Have a chain saw, fuel, hammers, saw, nails, screws, and fencing materials to make repairs.
- ⊕ Do not stay in the barn with your horse during the storm.
- ⊕ After the storm, examine your property for fallen objects, sharp objects and other dangerous materials, contaminated water, downed power lines, water and gas leaks, and dangerous wildlife.
- ⊕ Examine horses for injuries and signs of illness.

## **Ways to Mark your Horse for Identification in an Emergency**

- ⊕ Microchip before the emergency and have a copy of the number with you
- ⊕ Luggage tag (with contact information) braided into the mane or tail
- ⊕ Using waterproof paint, such as spray paint or livestock marking crayon, put your number on the horse in big numbers or paint a symbol or brand that has a meaning and is unique to you and your farm/horses
- ⊕ Clipper- shave information in animal's hair
- ⊕ Use a permanent marker to write on hooves
- ⊕ Have a halter for your horse that has a name plate with your name and number on it, or duct tape a tag with your information on it protected by a zip-lock bag
- ⊕ Neck collars
- ⊕ Leg bands
- ⊕ A visible brand
- ⊕ Lip tattoos
- ⊕ Keep a detailed record of your horses physical appearance and personality
- ⊕ If registered with a breed registry, have copies of those records and the DNA information if needed

\*Never attach Coggins or registration papers to your horse! Not everyone is honest, and having papers is a ticket to get out of the state with your horse!

## **Horse Tags**

Tags can be filled out and placed into a luggage tag or zip-lock bag to put on horses for identification purposes.

## **Evacuation Kit**

- ⊕ 7-10 day supply of feed and water
- ⊕ Bandannas (to use as blindfolds for horses if needed)
- ⊕ Batteries (flashlight, radio)
- ⊕ Blankets
- ⊕ Copies of veterinary records and proof of ownership
- ⊕ Duct tape
- ⊕ Emergency contact list
- ⊕ First aid kit
- ⊕ Flashlight
- ⊕ Fluorescent spray paint, Livestock Marking Crayon
- ⊕ Fly spray
- ⊕ Grooming brushes
- ⊕ Heavy gloves (leather)
- ⊕ Hoof knife
- ⊕ Hoof nippers
- ⊕ Hoof pick
- ⊕ Hoof rasp
- ⊕ Recorded diet for your animals
- ⊕ Recorded dose and frequency for each medication your horse uses. Provide veterinary and pharmacy contact information for refills
- ⊕ Knife (sharp, all-purpose)
- ⊕ Extra lead ropes
- ⊕ Leg wraps and leg quilts
- ⊕ Maps of local area and alternate evacuation routes (in case of road closures)
- ⊕ Non-nylon halters and leads (leather/cotton)
- ⊕ Paper towels
- ⊕ Plastic trash cans with lids (can be used to store water)
- ⊕ Radio (solar and battery operated)
- ⊕ Rake
- ⊕ Rope or lariat
- ⊕ Shovel
- ⊕ Trash bags
- ⊕ Twitch
- ⊕ Water buckets and feed tubs
- ⊕ Wheel barrow
- ⊕ Wire cutters

## **First Aid Kit**

- ⊕ Adhesive bandages in multiple sizes (bandages)
- ⊕ Adhesive tape
- ⊕ Antibacterial soap
- ⊕ Antibiotic ointment (for wounds)
- ⊕ Antibiotic eye ointment
- ⊕ Antiseptic towelettes
- ⊕ Bandage scissors
- ⊕ Bandage tape
- ⊕ Betadine® (providone-iodine) or Nolvasan® (chlorhexidine, scrub and solution)
- ⊕ Commercial ice packs
- ⊕ Cotton bandage rolls
- ⊕ Cotton-tipped swabs
- ⊕ CPR shield or mask
- ⊕ Duct Tape
- ⊕ Elastic bandage rolls
- ⊕ Emergency blanket
- ⊕ Eye dressing packet
- ⊕ Eye rinse (sterile)
- ⊕ Gauze compress
- ⊕ Isopropyl alcohol/alcohol prep pads
- ⊕ Latex gloves or non-allergenic gloves
- ⊕ Leg wraps
- ⊕ Medications (minimum 2 week supply, with clearly labeled instructions)
- ⊕ Non-adherent bandage pads
- ⊕ PVC Splints
- ⊕ Saline solution (for rinsing wounds)
- ⊕ Scissors/ knife
- ⊕ Sterile gauze pads 2 inch and 4 inch
- ⊕ Sterile lubricant (water-based)
- ⊕ Sterile surgical pads for pressure dressings
- ⊕ Stethoscope
- ⊕ Syringes and needles
- ⊕ Thermometer with tail clip
- ⊕ Tourniquet
- ⊕ Towel and washcloth
- ⊕ Triangular bandages
- ⊕ Tweezers
- ⊕ Vet wrap

## **Important Documents**

***(Keep these documents in a waterproof and portable container)***

- ⊕ Animal registration papers, proof of ownership (include photo of pet which should include unique characteristics of animal), microchip information, etc.
- ⊕ Animal medical history, vaccination records, and Coggins test
- ⊕ Pictures of you and your horse for identification verification purposes
- ⊕ Signed permission for emergency treatment with maximum amount willing to pay without contact
- ⊕ Insurance Policies (For horse, vehicles, and trailer)
- ⊕ Wills
- ⊕ Contracts
- ⊕ Deeds
- ⊕ Social Security card
- ⊕ Immunization records
- ⊕ Bank account numbers
- ⊕ Credit card numbers and companies
- ⊕ Inventory of valuable barn and household goods

## **Trailerinq Tips**

- ⊕ Start ***ahead of time*** practicing trailering with your horse.
- ⊕ Don't shove or force your horse into the trailer.
- ⊕ Be patient, even in an evacuation situation.
- ⊕ Don't let your horse back out of the situation, if he backs up have him back up twice as far. He will soon understand that it would be easier for him to go forward.
- ⊕ Load the horses that are known to load well first, it comforts the other horses to know that the trailer will not eat them.
- ⊕ Inspect your trailer for wear and tear before an emergency comes up, and have current insurance and registration.
- ⊕ If possible wrap your horses' legs or use boots to prevent injury.
- ⊕ Provide hay for the horse to munch on inside the trailer if going long distances.
- ⊕ Plan rest stops momentarily for the horses to drink and rest from traveling, especially when traveling long distances.

## **Equine Health Check List**

- Good body condition score
- Alert, inquisitive, and attentive
- Is not isolated if in herd situation
- Good hair coat- shiny, bright, not dull, if winter coat-cushy
- Good eyes-bright, fully opened, clear, free of discharge
- Hydration- pinch skin fold on neck or chest, should have ½-1 second snap back time
- Good manure/urine- firm manure, straw colored urine
- Mucous membranes- gums/lips, healthy pink (no pale, white, yellow, or purple)
- Capillary refill- press thumb against gums, color should return in 1-2 seconds
- Heart rate- 32-48 beats/minute (excitement, heat, and stress can affect rate)
- Respiratory rate- 8-16 breaths/minute, check at flanks. No nasal discharge or cough.  
(exercise, temperature, humidity, fever, and stress can affect)
- Temperature-99.5°-101.5°F, if over 102.5°F, call your vet! (high environmental temperatures, exercise, and dehydration can affect body temperature)
- Check body overall- cuts, scratches, abscesses, ect.

## **Recommended Vaccinations/ Test**

- ⊕ Coggins Test- required by law
- ⊕ Tetanus
- ⊕ Rhinopneumonitis
- ⊕ West Nile Virus
- ⊕ Eastern and Western Equine Encephalomyelitis
- ⊕ Influenza
- ⊕ Rabies
- ⊕ Potomac Horse Fever
- ⊕ Strangles
- ⊕ Also remember to deworm your horse
- ⊕ Speak with your veterinarian ahead of time about vaccinating your horse  
and for deworming recommendations

## **Risk and Concerns during Disasters**

\*Animal behavior may change drastically during emergency situations due to stress. Usually friendly and calm animals may become difficult to handle. Monitor animals in safe and secure enclosures to watch for signs of distress and changes in behavior.

- ⊕ Changes in diet cause horses to be prone to colic, laminitis, and other diseases. Follow each horse's feeding instructions closely and if a change must be made, do it gradually.
- ⊕ Isolate sick and new horses to prevent the spreading of diseases and follow other sanitary/biosecurity recommendations.
- ⊕ Do not leave horses where they may become trapped, such as in a stall.
- ⊕ Keep horses on high ground and be aware that if flooding occurs, they may not be able to see fences and may be caught in them.
- ⊕ Keep horses out of flood water if possible and rinse them thoroughly to prevent skin infections from harmful substances that may be in the water.
- ⊕ Give horses clean water to drink. Flood water may contain dangerous substances, such as chemicals, and pesticides.
- ⊕ Remove dangerous debris and obstacles from pastures.
- ⊕ Keep humans and animals out of barns that have been flooded, as they may be unstable, until it is declared structurally safe.

## **Sanitation and Disease Control**

- ⊕ Keep facilities clean
- ⊕ Give fresh feed and water daily
- ⊕ Wash feed and water buckets weekly
- ⊕ Disinfect stalls regularly, especially when a horse leaves or is sick
- ⊕ Isolate new arrivals and sick horses
- ⊕ Observe all horses for signs of illness
- ⊕ Clean bits, grooming equipment, tack, etc. (especially if it is shared between horses; as this can spread disease easily)
- ⊕ Keep in mind that standing water, especially a lot of water after a flood, can lead to outbreaks in diseases. Mosquitoes and other biting flies (that already reproduce well in the Louisiana climate) thrive in the warm, damp weather that often accompanies hurricanes. These insects can transmit diseases such as West Nile, Eastern and Western Equine Encephalomyelitis, and Equine Infectious Anemia. So, be sure that your animals are up to date on their vaccinations.

## Feeding

Horses should be fed as individuals based on their size, condition, and exercise. Try to keep horses' feeds and feeding times as regular and normal as possible during an emergency. Recognize when you are running low on feed so that you can get more quickly, and if you are forced to switch feeds, mix in gradually with normal feed and make the transition slowly. Be sure to monitor how much a horse is or isn't eating in emergencies as this can be a stressful time for them. Be sure to have your horses' diets written for rescue volunteers.

Generally, a horse should be fed about 2% of its total body weight, with approximately 75% of this being fed in roughage, grass, and hay. The other 25% can be feed in concentrates (feeds and grains) if needed for body condition. Half of the concentrates should be fed in the morning and the other half in the evening with a five lb. max at one feeding. For example, a 1,000 lb. horse should get 7.5 lbs. of hay (about 1/5 of a rectangular bale) and 2.5 lbs. of grain at each feeding. The chart below can assist when figuring out feeding rations for unknown horses.

	Adult Weight (lb.)	Newborn Weight (lb.)	Approx. Height (Hands)
Giant Breeds	1,500- 2,000	150-200	>17
Full Size	750-1,200	75-100	15-17
Pony	500-750	50-75	<15
Miniature	200-400	20-40	<40 inches

## **Water Purification**

Horses drink a lot of water and your supply may run out. Here are a few ways to purify water for drinking.

- ⊕ Boil water for one minute and let cool before using.
- ⊕ Add 8 drops (1/4 teaspoon) of household bleach per gallon of clear water, or 16 drops (1/2 teaspoon) per gallon of cloudy water. Mix and let stand for 30 minutes.
- ⊕ Use water purification tablets following the package instructions.
