

PARTICULATE PROTECTIVE GEAR

AEGIS [a'jis]

the protection, backing, or support of a particular person or organization.

STEDAIR® PREVENT

STEDAIR® PREVENT is the leading particle blocking material. The PREVENT Particle Blocking Barrier Technology provides the best solution for firefighters.

PRODUCTS AVAILABLE

Long Sleeve Shirts
Short Sleeve Shirts
Long John Underwear
Boxer Brief Underwear
Station Pants
Station Shirts
Hoods

- **99% PARTICULATE BLOCKING EFFICIENCY TO .01 MICRON.**
- **HIGHLY AIR PERMEABLE**
- **HIGHLY BREATHABLE**
- **SOFT AND COMFORTABLE FABRIC COMPOSITE**

AEGIS FIRE GEAR® is designed to protect firefighters from particulates that carry carcinogens that have been shown to be harmful. Studies have also shown that firefighters have a greater risk of developing certain types of cancers due to the exposure of these carcinogenic toxins above that of the average population. The IAFF has stated that in 2016 70% of firefighters deaths were due to cancers. Our garments are designed to be worn as a base layer under your turnout gear. Turn out gear allows for the smoke and particles to pass through various points in the gear. AEGIS FIRE GEAR® which utilizes a composite layer of soft, flexible fabric laminated to STEDAIR® PREVENT air permeable particulate blocking layer that blocks particulate at 99% efficiency to .01 micron.

Even the best SOP's cannot prevent the harmful particulate exposure our firefighters are experiencing nearly every day. We are seeing that firefighters are being exposed during the fire event as well as after the fire during overhaul. Non particulate blocking garments allow for carcinogens to pass through the fabric and be absorbed into the skin. Thereby exposing firefighters to those toxins. Firefighters are also cross contaminating themselves with unwashed gear. Protect your future by using AEGIS FIRE GEAR that can mitigate the amounts of exposure to harmful toxic carcinogens.

MOISTURE WICKING BENEFITS

- When you are cold, and therefore not sweating, compression clothing will trap the air next to the skin and keep you warmer than loose clothing.
- When you are hot, and therefore sweating, compression clothing will spread out the sweat so that it evaporates more efficiently. The evaporation cools the compression clothes, which being next to the skin, helps keep you cool.
- Compression clothing will keep you cooler than bare skin. With bare skin, the sweat will drip off your body with little cooling effect.
