R.F.A. Mathematics of Investing Fact

-20%/+25% - An initial investment of \$10,000 that falls to \$8,000 is a mathematical loss of **-20%**. To gain back your original \$10,000 investment from \$8,000 requires not a return of +20% but **+25%**. Given this mathematical principal, prudent Investment Advisors hue to the edict of being the ‘tortoise’ rather than the ‘hare’. Or, in a different vernacular, provide Clients upside participation but with moreover downside protection.

R.F.A. Bond Market Fact

...except 2018 [nearly], 2013, 1999, and 1994 – In the past 20 calendar years, the domestic bond market has never posted a negative total return...**except 2018 [nearly], 2013, 1999, and 1994**. In a normal interest rate cycle, bonds can be the ‘buoyant life-jackets’ to a diversified asset allocation portfolio. Generally, Bonds provide long-term total returns lower than Stocks, but their fundamental structure and priority along the capital structure provide diversification benefits. **Note that for 2018, the total return for the domestic bond market was 0.0%; but up until 4th quarter it had a negative -1.6% year-to-date total return.**
