

FloodSax

FloodSax®, are the innovative instant sand less sand bag changing the way you control damage due to flooding, storms and accidental water spillages.

The semi-porous inner liner contains hundreds of super absorbent crystals which absorb water to 90% capacity in just 3 minutes. Once the water is in there, it stays there, and the bags act just like traditional sand bags to keep flood water at out.

FloodSax® are clean, compact and lightweight so they can be stored in every home and business ready to be used at a moment's notice. FloodSax® enable virtually anyone including the elderly to respond immediately to flooding and accidental water damage using FloodSax®.

A Rapid Response in Any Water Emergency

FloodSax® are totally self-contained so there is no sand and no bags to fill and the fact they are compact and lightweight means you can distribute thousands more FloodSax® than traditional sand bags with fewer people more effectively.

There is no denying that even with pre-made sandbags, the time and effort involved responding to a flood is made easier (and faster!) with FloodSax®.

Over the last 24 months there have been many instances of intense rainfall damaging homes, businesses and public assets. Having an easy to use flood mitigation device on hand ready to use at moment's notice could have minimised water damage in many instances.

A Flood and Storm Mitigation Device

Take your FloodSax instant sandbag out of the bag and place in position, energise the bag using water from a hose, bucket, sink or the flood water itself and within minutes you are ready to protect your home or business.

Place expanded FloodSax in layers to build a barrier to the height required, ensure each bag is placed tightly against the previous bag to stop water seeping through cracks between bags.

FloodSax
