## Acoustic Hanging Solutions

AbsorbaRaft suspended acoustic panels provide the perfect combination of performance and design flexibility. The panels are designed to improve the quality of your environment through the products ability to absorb sound and reduce reverberation whilst giving you maximum performance and precise control.

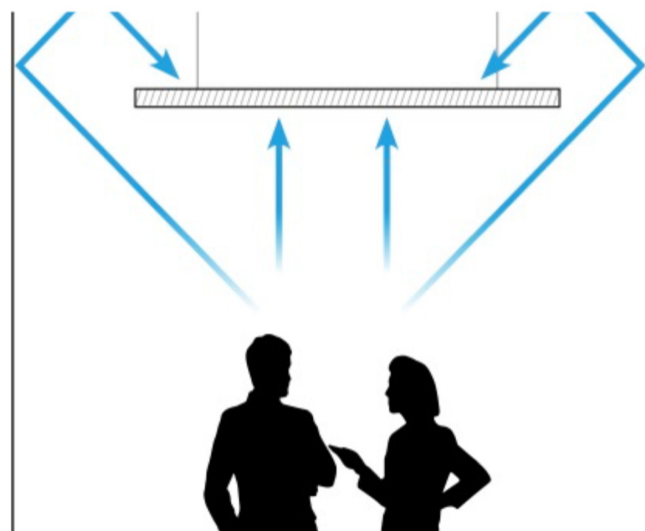

AbsorbaRaft suspended acoustic panels are available in various shapes and sizes that range from circles, squares and rectangles to stars, clouds and teardrops. AbsorbaRaft can be suspended individually or why not use your imagination to create your own unique formation.

AbsorbaRaft panels come as standard 25mm thickness and are specifically designed to absorb sound from the front and rear surfaces. This enables AbsorbaRaft to achieve 0.95 NRC performance in sound absorption.

AbsorbaRaft panels come in a range of fabrics, including Camira's Cara, Blazer and Lucia ranges.

**A FLEXIBLE AND STUNNING  
CLASS A ABSORBER**
