Æquitaverse

Where equity is the law of physics

A virtual universe with its own economy — where every unit of currency is born from real production, every transaction is public, and every citizen is an auditor. Not a game. Not a bank. A new world that makes the old one obsolete.

1 Æ Veræ = 1 168.07 mg gold

4 793.20 \$US / troy oz · frozen 8 April 2026

1 Æ = 1 000 G Granæ

1% Caisse Publique · all transactions

THE PROBLEM WE SOLVE

TODAY

Money is born from debt. Banks create currency by lending; 97.5% of transactions produce nothing physical. The US dollar contains only 2.5% real MET value — the rest is fictional debt.

MET

Currency is born from production. Every Æ Veræ is minted at the moment a real good is created — calibrated to the energy and human labour it required. 1% of every transaction flows to the Caisse Publique.

FOR WHOM

For producers

Skip 6 intermediaries. Receive 85–90% of market price. Pay only 1% to the Caisse Publique instead of 30% corruption.

For governments

Every public transaction on blockchain. Every citizen incentivised at 50% of recovered fraud. Structural deficit impossible.

For capital markets

Isolated casino: options, futures, leverage × 100. Every move funds the Caisse Publique at 1%. Liquidity preserved.

USD conversion multiplier (2.5% MET)

The MET rate measures the % of real Energy-Labour value in each fiat currency. The remainder is sovereign debt, derivatives, and fractional reserve — fictional value. Multiplier = 1 / MET%. All rates include +1% Caisse Publique on top.

```
Régime 1 (USD-pegged) :MET% = 2.5% fixed · Multiplier ×40 · constitutional
Régime 2 (sovereign) :MET% = max(1%, min(50%, F1 × F2 × F3 × 100))
F1 = 1 - [(Debt/GDP×0.40) + (M3/M1×0.05) + (Deriv/GDP×0.30) + (Leverage/200)]

"You never change things by fighting the existing reality. To change something, build a new model that makes the existing model obsolete."

— Buckminster Fuller

THE STRATEGY — WHY A VIRTUAL
UNIVERSE

TRAP

Every monetary alternative has tried to convince existing institutions to change. All have failed. Central banks do not reform themselves. The Aequitaverse does not ask permission.

KEY

The Aequitaverse launches as a virtual world. Legally, it is a game. Economically, it is the most honest monetary system ever built. By the time regulators understand what is happening, 500 million people already live there — and the Æ Veræ is already anchored in physical gold.

AURUM

The golden plains

Cereal production zone. Real farmers anchor here. Virtual farms mirror real harvests. Where most Æ Veræ are born.

VIRIDIS

The eternal forests

Long-cycle production: timber, coffee, cacao, fruit. Rewards patience with the CLI time multiplier F_t .

SOLARA

The luminous deserts

Renewable energy production. Solar, wind, geothermal anchored here. Energy as currency — literally.

NEXUS

The city of markets

The isolated casino. Options, futures, leverage $\times 100$. Goldman Sachs has an office here. Every bet funds the Caisse Publique.

AQUA

The floating archipelago

Sustainable fisheries and certified water. The scarcest and most valued resources on Earth, represented faithfully.

CIVITAS

The city of laws

The Assembly (sortition), Tribunal, and Caisse Publique. Every vote is live. Every expenditure is a public blockchain event.

THE ROADMAP

2026

Launch as virtual world. 1M inhabitants. Protocol v1.0.0.

2027

Via Campesina onboarded. Real Æ Veræ in circulation.

2029

100M inhabitants. Goldman at NEXUS. Æ trades on markets.

2031+

First central bank connects. UN recognises. Irreversibility.

The world doesn't need another cryptocurrency.

It needs a universe where the rules of money follow the laws of physics — not the interests of banks. The Aequitaverse is that universe. The Æ Veræ is its gravity. Production is its genesis. The Caisse Publique is its conscience.
