LOADRITE S1100 Onboard Weighing System for Compact Machines

Accurate in-cab payload measurement

The Trimble LOADRITE S1100 is an on board scale that provides an accurate in-cab payload measurement for compact machines. It is suitable for use on tractors, forklifts and skidsteers, across a range of machine sizes, brands and models.

Weighing with LOADRITE scales helps the operator to accurately weigh every lift, prevent overloading and effectively manage stock. So you can improve safety and profitability through increased efficiency and accuracy.

LOADRITE products are designed for reliable use in rugged environments quarries and mines around the world. The S1100 is suitable for use in open cabs or exposed, wet or dusty environments (IP67 rating) and has one year parts and workmanship warranty.

Reliable accuracy

Get consistent and reliable weighing first time, every time. The S1100 calculates weights by measuring changes in hydraulic pressure within +/- 2%.

Easy-to-use and compact interface

Weighing is triggered manually triggered by the operator using a simple four push-button interface. This ensures that all operators are able to weigh accurately, regardless of experience. The S1100 is mounted to either the ROPs or your dashboard and requires minimal space in the cab, ideal for smaller machines.

Multiple attachments

Weigh across multiple attachments, use up to nine individual attachments (bucket, forks, hay squeezer, soft hands and more).

System Components: Tractors and Forklifts

1 TRANSDUCER:
Connected to the hydraulic system to measure pressure.

2 INDICATOR:
Mounted in the cab to clearly display lifted weight.
