The Rapid Deployment Connectivity Solution

Adaptable Technology & Specifications

The RDU MightyMaxx is engineered with solid-state technology and industry-standard 4x4 Access Points to provide stable user access to cloud applications

- ✓ Rapid deployment in minutes, not days
- ✓ Secure access to cloud and business applications
- ✓ Supports business continuity and disaster recovery
- ✓ Enterprise-grade 4x4 wireless connectivity
- ✓ Reliable performance in remote and challenging environments

INTEROPERABILITY

Seamlessly integrates with existing systems and networks across your infrastructure.

AUTONOMOUS SYSTEM

Operates independently with intelligent automation for reduced complexity and risk.

MISSION CRITICAL

Built for the moments that matter most—when failure is not an option.

Rapidly Deploy Secure, Resilient Connectivity Anywhere

Ensuring Business Continuity When and Where It Matters Most™

RDU MightyMaxx

RDU MightyMaxx Limited *is a U.S.-based technology company specializing in rapid deployment communications systems. Headquartered in Norman, Oklahoma, in 2022, we design and manufacture rugged, interoperable solutions that enable secure and resilient connectivity when and where it matters most.*

Our flagship product, ***the MightyMaxx Smart Rapid Deployment Unit****, is engineered to bridge critical communication gaps in emergency response, government operations, event production, industrial sites, and enterprise continuity scenarios. Built with solid-state technology and a focus on real-world performance, RDU MightyMaxx units deploy in minutes and operate reliably in challenging conditions.*

CERTIFICATIONS: CMMC

OUR MISSION: *We develop innovative products and services for clients who demand dependable performance in complex operational environments.*

DUAL STACK RDU

STANDARD RDU

Essential Features

- Rapid deployment of sensors and antennas to significant heights – 8 minutes to 80 ft. / 24m
- Payload up to 1,200 lb. / 544 kg
- Available in 80 ft. / 24m and 120 ft. / 36m heights
- Telescopic Mast Lifts the Payload – No cranes required
- Powerful Automatic Locking System – maintains height indefinitely – even without power
- Minimized mast twist with Full-length mast section keys
- Integrated Controls
  - Fully integrated control system
  - PC control capable
    - CAN-bus J1939
    - RS485 Serial

HEAVY DUTY 80FT TRAIN OR FLAT BED SOLUTION

MINI MAXX

- MINIMAXX IS AN ENTRY-LEVEL OPTION THAT CAN BE FIELD-UPGRADED TO A FULL MIGHTYMAXX. WHAT IS INCLUDED IN A MINI IS A HAND-CRANK MAST WITH AI EQUIPMENT MONITORING FOR THE SATELLITE, ROUTER, AND POWER PLANT. NO NOC; ALL NOTIFICATIONS GO TO THE CUSTOMER. ONBOARD AI REMEDIATION AND NOC IS INCLUDED IN THE FULL RDU SOLUTION.

RDU

- **RDU MightyMaxx Overview**
- RDU MightyMaxx acts as a mobile "smart tower." It's not just structural hardware; it arrives as a robust, pre-configured technology hub for emergency management, remote industrial environments, and tactical communication.

- **Pneumatic Mast System:** Uses air pressure for expansion and features high wind tolerances (up to 100 mph).
- **Built-in Connectivity:** Features multi-carrier **Massive Client Capacity. Power Ecosystem:** Fan-free, silent DC architecture powered by grid power, solar arrays, batteries, and AI-controlled generators; mast height and all network-manageable components.
- **Vandal-Resistant side panels:** Built with 100% steel panels, double-lock side panels, and protective NEMA enclosures to prevent theft or tampering on unmanned job sites. AI sensors to self-protect
- **Uses Will-**Burt masts for Commercial and military-grade solutions. Will-Burt is considered the leader in mast production and quality.
- **4x NEMA enclosures, weatherproof and washdown, corrosion-resistant**
- **Open Hardware Architecture:** Does not lock you into any network or software ecosystem.
- **Anti-drone system included in this quote**
- **Drone platform add-on**
- **AI camera imaging platform add-on**.
- The best solution depends entirely on your operational goals. If you need immediate, high-capacity field communications or a basic COW trailer solution, **RDU MightyMaxx** is the superior choice.

Mobile Tower Options Comparison

Feature	FirstNet miniCRD	FirstNet CRD	FirstNet CRD	T-Mobile SatCOLT / SatCOW	T-Mobile Nomad XL	RDU MIGHTYMAXX
						
Primary Use Case	Ultra-portable, localized off-grid coverage.	Towable, medium-scale disaster recovery.	Heavy-duty, high-capacity mobile hub.	Enterprise/Disaster cell tower on wheels.	Massive mobile command & macro tower.	Enterprise/Disaster cell tower on wheels.
Ownership Model	Agency-purchased (~$35k).	Agency-purchased (~$99k).	Agency-purchased (~$85k).	Carrier-deployed (T-Mobile ERT).	Carrier-deployed (T-Mobile ERT).	Agency-purchased (~$165k).
Footprint / Weight	~85 lbs (fits in cases).	~650 lbs (towable trailer).	~620 lbs (hitch-mounted).	Medium to large truck/trailer.	Heavy-duty logistics command vehicle.	~1200 lbs (hitch-mounted).
Coverage Radius	1 to 3 square miles.	12 to 50 square miles.	12 to 50 square miles.	2 to 5+ square miles.	Macro-level regional coverage.	12 to 50 square miles.
Primary Backhaul	Satellite / Terrestrial.	Satellite (ViaSat / Starlink).	Satellite (Starlink bundled).	Satellite (T-Satellite / Starlink).	Satellite, Microwave, & Fiber.	Satellite, Microwave,MESH, & Fiber.
Setup Time	Under 5 minutes.	Under 10 minutes.	Under 10 minutes.	Scaled within hours of request.	Deployed via specialized dispatch.	Under 10 minutes.
Onboard Power Plant	Generator or Solar Panel option, limied power storage	Generator or Solar Panel option, limied power storage	Generator or Solar Panel option, limied power storage	Generator or Solar Panel option, limied power storage	Generator or Solar Panel option, limied power storage	AI manages all power allows for power storage and conditioning while generating power of outside resources as needed.The power system is designed to hold 5 days of serviceable energy before introducing a generator or a solar cell panel system
AI onboard, AI managed, AI Remediations capable locally	None	None	None	None	None	AI manages all power related devices onboard
Requirement for manual onsite inspection or frequently scheduled maintenance for months, NOC oversight,	Does Require	Does Require	Does Require	Does Require	Does Require	DOES NOT REQUIRE: NOC support. With onboard AI and Extended power resources, the system does not require frequent manned attention. Monitoring is remote.

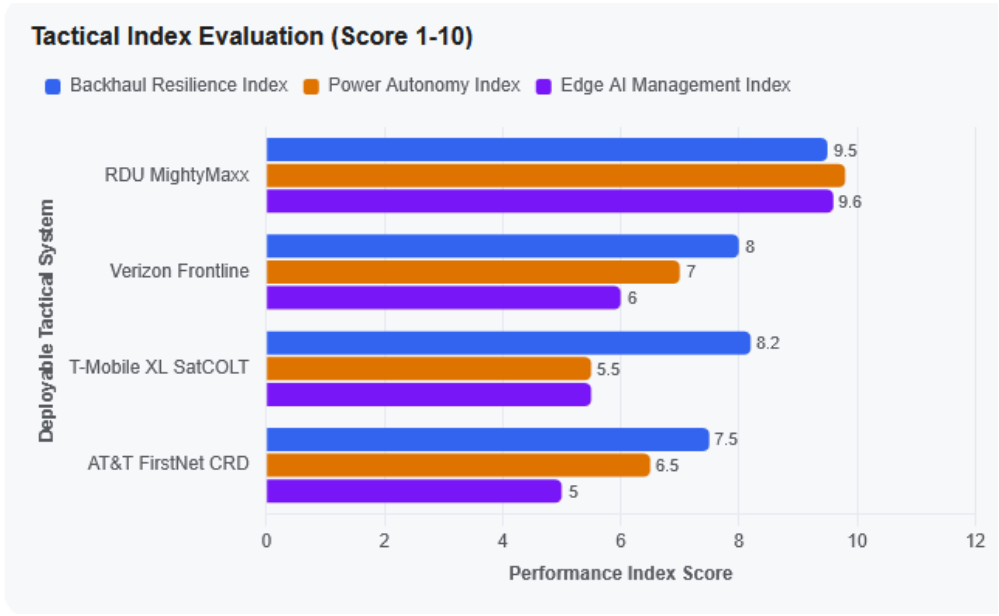

The comparison below breaks down the technical output, structural footprint, and deployment capabilities of the RDU MightyMaxx Smart Tower against the frontline tactical units from major carriers: T-Mobile's XL SatCOLT/SatCOW, AT&T's FirstNet Compact Rapid Deployable (CRD), and Verizon Frontline's Rapid Response Connectivity Unit / SatRunner. **Operational & Output Breakdown**

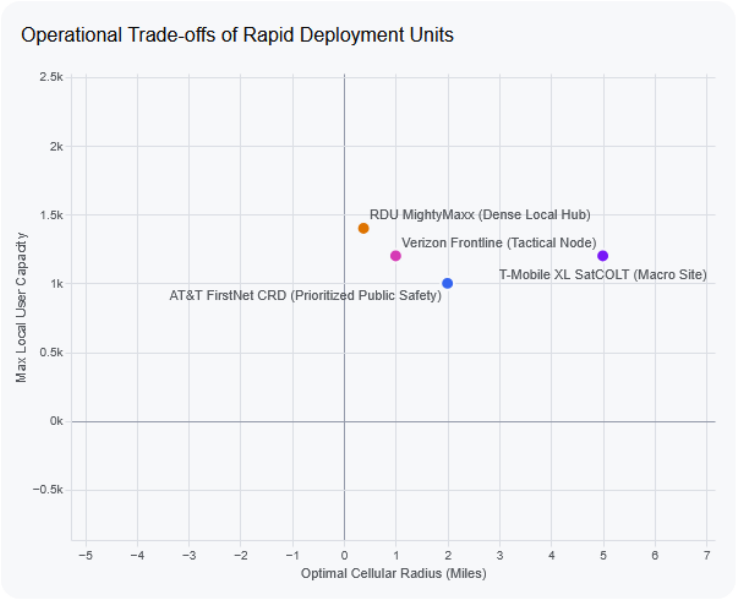

- **RDU MightyMaxx Unit:** Operates as a dense, high-capacity, multi-carrier tactical cube. It is carrier-agnostic, supports up to 5 concurrent WAN pathways, and offers exceptionally high localized Wi-Fi capacity (up to 1,400 simultaneous clients). It bridges localized bubbles using Starlink or multi-SIM cellular bonding.

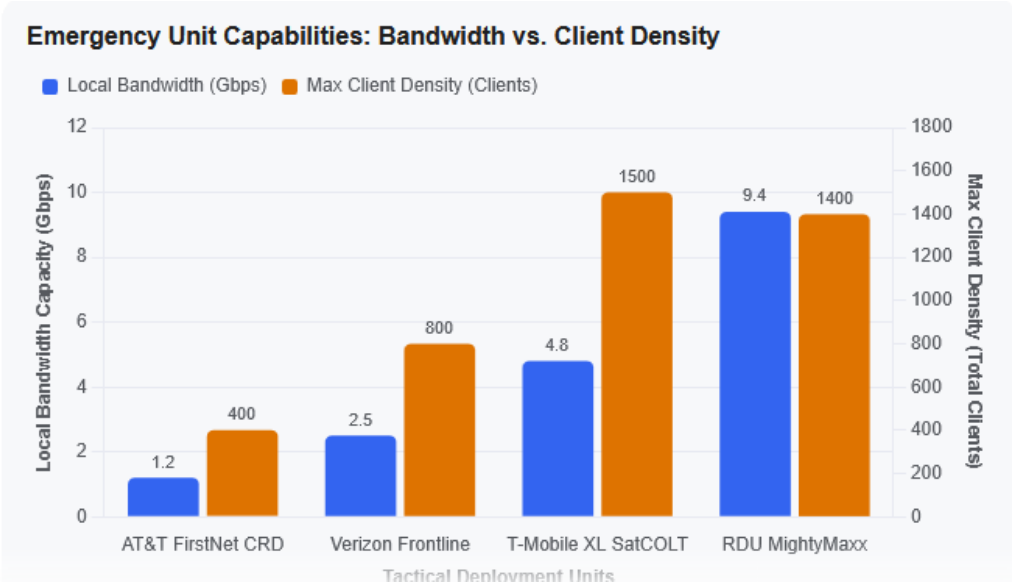

- **T-Mobile XL SatCOLT / SatCOW:** These are massive, macro-grade infrastructure assets built on commercial truck or heavy trailer platforms. They host high-power, multi-band 5G radios that can restore network access across an expansive 3 to 5-mile radius via heavy-duty 65 to 100-foot masts.

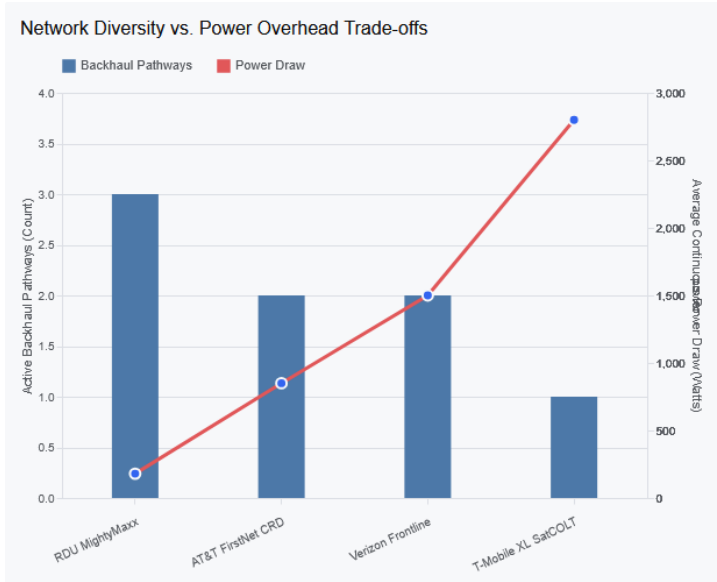

- **AT&T FirstNet CRD:** A highly specialized public safety unit emitting a dedicated, high-power Band 14 FirstNet LTE signal. It prioritizes mission-critical traffic, offering up to 50 square miles of Power Class 1 HPUE (MegaRange) cellular coverage and up to 1,000 local connections. [1, 2, 3]

- **Verizon Frontline Rapid Response / SatRunner:** Built as an all-terrain motorized carriage or modular hitch device. It is C-Band 5G enabled, supports LEO/MEO satellite backhaul, and feeds integrated 4G/5G network extenders built to support localized 5G network slicing for up to 120 active public safety users

906045	MMP-MAST 6	Locking	Heavy Duty	200	91	7	42	6 ft cube chassis

RDU MightyMaxx Tech Specs:

Physical Specifications

- **Footprint:** 5'x4'
- **Transport Height:** 7'
- **Extended:** 23'
- **Weight:** 1,300 lbs

Wireless Technology

- **Industry Standard:** 4x4 Access Points
- **Mobile Cellular LTE Connectivity:** 3G, 4G, or 5G
- **Low Earth Orbit Satellite**

Wi-Fi Capability

- **Band:** Wi-Fi 5, 6, or 7
- **Clients:** up 1,400 based on AP configurations
- **SSID:** Multiple
- **Programmable Bandwidth:** Per SSID/client
- **Range:** at least 2,000 ft. in any direction (with clear line-of-sight)

AI MANAGED AND ONBOARD REMEDIATION

FEATURES

- Rapid deployment in any environment
- Multiple power and uplink options
- Flexible wireless, security, and Internet-of-Things applications
- Operational in all weather conditions
- Co-branding options
- Professional delivery, activation and support services
- Hosted/managed services
- Custom configurations

- **<u>Cellular</u>**
- **2 SIM card slots**
- **All carriers approved**
- **ADD SIM CARDS**
- **Recommended to existing plan**

Stacks are rated for 70 lbs or 200 lbs, depending on whether the mast is locking or non-locking. Supports Private 5G, WiFi, etc. Your choice OEM

Connect lo your local network or Temp location fixed or mobile using fiber or copper

RDU MightyMaxx Compatible Anti-Drone Solutions

Core Use Cases

- **Counter-UAS & Airspace Security:**
- **Border & Perimeter Surveillance:**
- **Pop-Up Asset Protection:**

Deploying the Echodyne EchoGuard radar system on the RDU MightyMaxx Smart Tower creates a highly versatile, mobile, rapidly deployable surveillance and counter-unmanned aircraft system (C-UAS) platform. [1, 2]
This combination pairs a market-leading software-defined radar with an autonomous, ruggedized communication and power hub, making it optimized for border security, force protection, temporary event security, and critical infrastructure monitoring. [1, 2, 3]

System Synergy

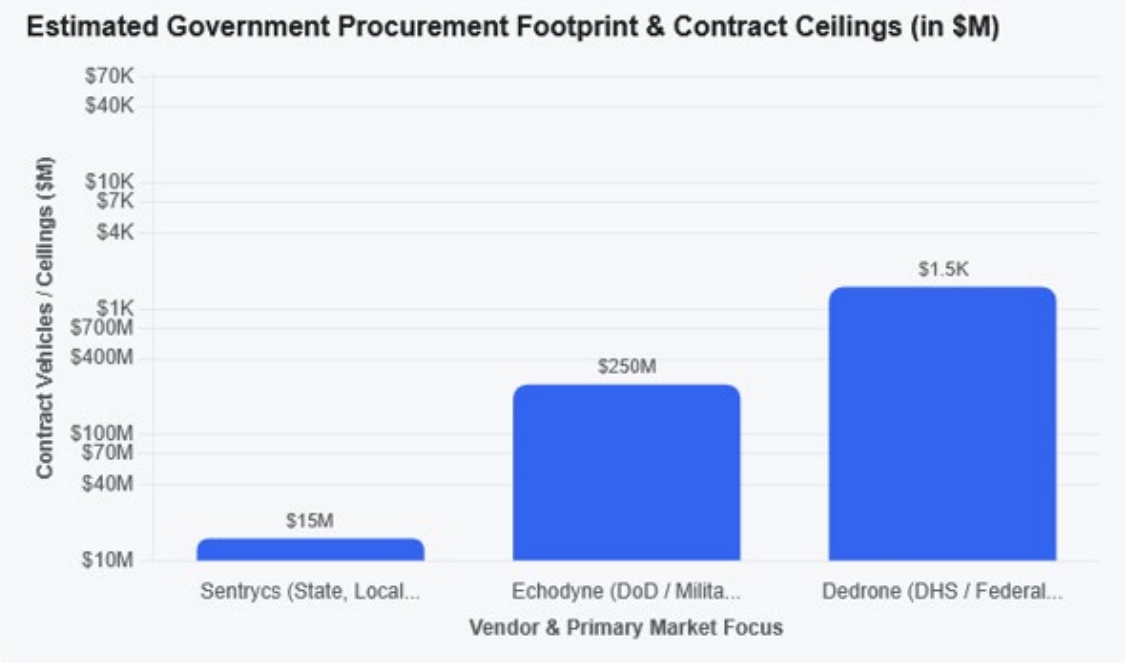

Feature	Echodyne EchoGuard Radar	RDU MightyMaxx Smart Tower	Integrated Capabilities & Benefits
Mobility & Setup	• Ultra-low SWaP (Size, Weight, and Power) • Under 25 kg	• Forklift-ready • Mobile cube chassis • Single-technician deployment	**Rapid Mission Deployment:** The entire system can be fully operational in less than an hour, allowing teams to deploy military-grade radar surveillance anywhere without permanent infrastructure.
Elevation & Reach	• MESA (Metamaterials Electronically Scanned Array) • High-accuracy 3D/4D tracking	• Pneumatic mast • Extends up to 23–42 feet • Winds rated up to 80 mph	**Maximized Line-of-Sight:** Elevating the EchoGuard radar clears ground obstructions and terrain masking. This maximizes its 1km detection range for small drones and low-altitude threats.
Power Autonomy	• Low power consumption (~6 hours on a portable battery)	• Onboard UPS and battery array • AI-controlled gas generator/fuel cells	**Extended Off-Grid Operations:** The MightyMaxx provides continuous power for 84 to 168 hours completely independent of a local power grid, sustaining the radar and communication systems in austere environments.
Data & Connectivity	• TCP/IP data via Gigabit Ethernet	• Multi-carrier 5G/LTE • Starlink LEO	**Real-Time Remote Command:** Radar tracking data, target classification (human, vehicle, drone), and camera cueing feeds

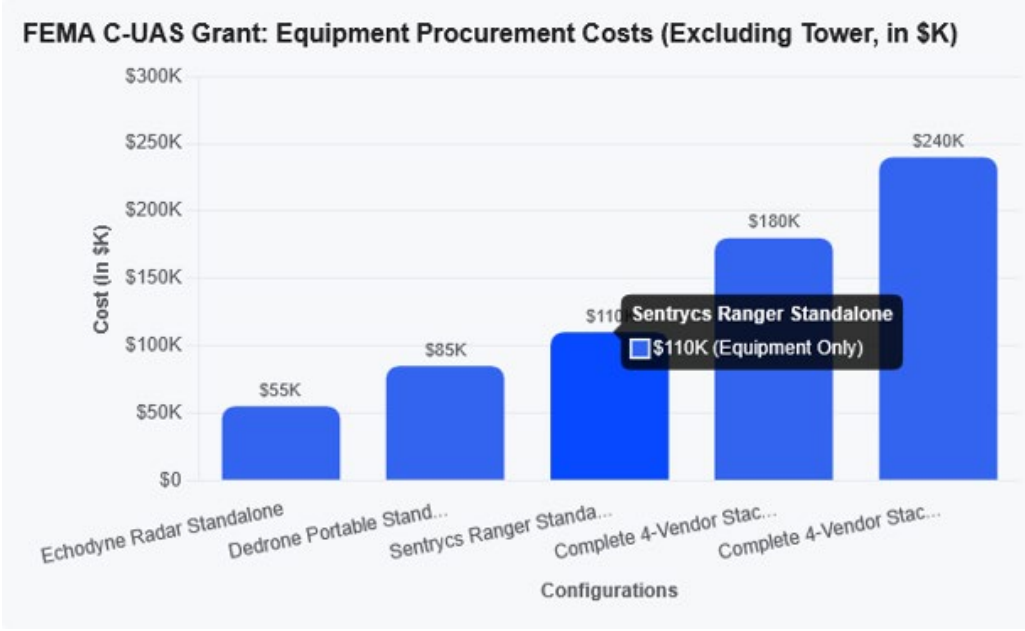

RDU MightyMaxx Compatible Anti-Drone Solutions

To successfully use anti-drone (Counter-UAS) technology on the **RDU MightyMaxx Smart Tower** under the **FEMA FY 2027 C-UAS Grant Program**, the configuration must respect both the physical limits of the tower and the strict compliance rules of the grant (specifically 6 C.F.R. Part 124 and the SAFER SKIES Act framework). [1, 2]
The MightyMaxx features a **23-to-56-foot pneumatic mast** supporting up to **200 lbs. of payload**, integrated **Starlink/5G network backhauls**, and an autonomous battery system delivering **up to 400W continuous DC load**. Because the tower is a transportable, forklift-ready "cube chassis" rather than a fixed installation, it naturally qualifies under FEMA's strict mandate for **mobile or rapidly deployable solutions**. [1, 2, 3, 4]
The following manufactured anti-drone systems are physically, electronically, and legally optimized to integrate directly with the RDU MightyMaxx platform:

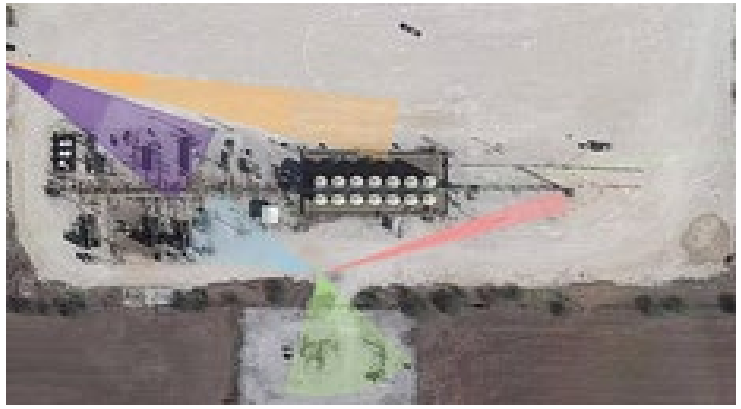

Multi-Criteria Comparison

Evaluation Criteria	Sentrycs Ranger	Echodyne EchoGuard	Dedrone Tracker + PTZ	Ondas Dronebuster Kit
Primary Capabilities	Detection & Mitigation	Detection & Tracking	Detection & Tracking	Mitigation Only
Physical Load (200 lbs max)	**Excellent** (35 lbs)	**Excellent** (25 lbs)	**Moderate** (85 lbs)	**Lightweight** (15 lbs)
Power Profile (400W max)	**Low** (150W)	**Ultra-Low** (100W)	**High** (280W)	**Low** (80W)
FEMA Grant Priority	**High** (ASL Approved)	**Highest** (Radar Focus)	**High** (Multi-Sensor)	**High** (ATL Approved)
Target Drone Types	Commercial (DJI, Autel, etc.)	All (including "Dark Drones")	Commercial / RF-emitting	Commercial / RF-emitting

STRATEGIC PARTNER

AI VISION ANALYTICS

Industrial camera analytics that run at the edge

VisionAery turns the cameras already on your sites into real-time industrial camera analytics — liquid leak detection, fire & smoke detection, and flare monitoring — running on edge GPU hardware at the site and feeding your existing VMS and SCADA through the same alarming paths as third-party analytics.

STRATEGIC PARTNER

DRONE AND DRONE LANDING AND CHARGING PAD SOLUTION. ADD-ON PRICING AVAILABLE UPON REQUEST

Operational & Financial Trade-Offs for the RDU MightyMaxx

- **Skydio Ecosystem vs. Open Platform Costs:** The Skydio platform represents a closed, secure ecosystem where the hardware and cloud architecture are tightly integrated to satisfy strict Department of Homeland Security (DHS) guidelines. While the initial upfront cost is high, it includes critical software security tools natively. Opting for a hardware agnostic dock like the **Hextronics** means a lower initial hardware entry point (~$15,000), but you must independently purchase and audit secure, CMMC-compliant drone-in-a-box orchestration software. Dronehub +1
- **Hidden First-Year Integration Line Items:** When engineering a true autonomous deployment for critical infrastructure, expect localized setup fees. Government-facing resellers structure site-commissioning and hardware deployment packages (such as Skydio's 5-day on-site commissioning) at roughly **$35,250**. Annual hardware maintenance contracts featuring comprehensive parts replacement average around **$9,900/year**. Dronehub +1
- **Federal Funding Elasticity:** If your project utilizes FEMA Counter-UAS or State Homeland Security Grant Program (SHSGP) capital, ensure your quotes explicitly itemize the **NDAA Section 848 / Blue UAS** verification to clear procurement hurdles. Because these platforms prevent foreign data exploitation out of the box, these line items are fully eligible for grant coverage, whereas cheaper commercial options (like DJI) face total federal purchasing bans. Dronehub

System Name	Compliance Status	Key Mobile / Technical Attributes	Best Suited Payload Integration
Skydio Dock for X10	**Blue UAS Listed** (Added July 2026)	• Fully American-made and secure • Rapid deployment (airborne in 20 seconds) • Designed for harsh environments	**Skydio X10 / X10D** (Thermal, optical, and night-vision capabilities)
Hextronics Universal / Eclipse	**NDAA Compliant** (Built in USA)	• **Robotic battery swapping** in 80 seconds • IP66 weatherproof enclosure • Operates from −20°C to 50°C	**Drone-Agnostic** (Supports Parrot ANAFI USA GOV, Anzu Raptor, and others)
Valinor Dispatch Dock	**NDAA Compliant** (CRADA with US Army)	• Built specifically for **mobile/off-road platforms** • Onboard compute storage & self-leveling gimbal platform • 1,000W rugged rapid-charging capability	**Short-Range Reconnaissance (SRR)** systems like Teal Black Widow or Skydio X10D
