PERFORMANCE

Features three welding modes: low spatter, rapid spot welding, and constant voltage.

Enables ultra-low spatter welding for carbon steel ranging from 1mm to 3mm in thickness. Welding spatter is reduced by 60%.

Heat input is reduced by 10% to 20%, making thin-plate welding easier to control with minimal deformation.

Fully digital system achieves precise control of droplet transfer, ensuring consistent and stable welding quality.

Adopts soft-switching inverter technology to enhance overall machine reliability and energy efficiency.

Fully digital high-precision wire feed control system, featuring a dual-drive, dual-slave wire feed unit with encoder-based full digital control. Ensures stable wire feeding even when external factors such as power supply voltage or wire feed resistance fluctuate.

WELDING PERFORMANCE

Features four welding modes: constant voltage, single pulse, double pulse, and super double pulse.

It can weld carbon steel, stainless steel, aluminum and its alloys, copper and its alloys, and other non-ferrous metals.

It is equipped with a super double pulse welding function for carbon steel, stainless steel, and aluminum alloys.

It can achieve spatter-free super double pulse welding on aluminum alloy workpieces with a thickness of 1.2–4 mm. The scaly weld bead formation is comparable to that of TIG welding, and the welding efficiency is higher than TIG welding.

Mainly used in bicycles, scooters, leisure furniture, new energy vehicles, and other fields.
