

HOW TO TAKE A VIRTUAL 3D TOUR!

1. You do not need any special glasses or computer hardware.
2. 3D only refers to your ability to move through a space at will.
3. Click the center “Play Button” when you get to the tour page.
4. By default, you will be placed into a starting location inside the space.
5. Simply point and left click your mouse or touch your screen to move.
6. Each grey circle you see on the ground is a place which you can land on.
7. Left click and drag your mouse in any direction to look up, down, etc.
8. If you see a colored bullet icon near an object, click on it to learn more about the item including links to other related websites.
9. Use the white icons in the lower left of your screen to change your view:
 - The Play icon takes you on a preset tour of key areas.
 - Doll House View allows you to fully zoom out of the space.
 - Floor Plan View allows you to look straight down on the space.
 - You can even use the Measure icon to click between two points and find the exact size of any object that you want!
 - Click back on the floor plan to move back into a regular view.
10. On the bottom right you will see additional icons where you can share the space, use actual 3D goggles if you have them, or view full screen.
