FEED VOLUME: Estimates of feed volume are based on the animal being maintained in a thermoneutral environment with milk as the only source of food. Milk volume in ml per day for an animal of body weight W kg is given by the basal metabolic rate for Artiodactyla⁴, with an energetic multiplier of 2.1:

$$2.1 \times 305W^{0.802}$$

Body Weight (kg)	Feed Volume (mL/day)	Body Weight (kg)	Feed Volume (mL/day)	Body Weight (kg)	Feed Volume (mL/day)
40	2800	80	4800	120	6700
45	3100	85	5100	125	6900
50	3300	90	5300	130	7200
55	3600	95	5600	140	7600
60	3800	100	5800	150	8000
65	4100	105	6000	160	8500
70	4400	110	6300	170	8900
75	4600	115	6500	180	9300

GROWTH & DEVELOPMENT: Typical birth weight is 60–70kg. Average daily weight gain is typically about 1.0-1.5kg per day³.
