

LAMENESS

Healing with horsepower

Pro-Stride® APS is a regenerative medicine device that concentrates the healing properties of your horse's own blood to naturally manage equine lameness and osteoarthritis.

Pro-Stride®
APS

zoetis

What is Pro-Stride APS?

A two-step device to separate and concentrate anti-inflammatory cytokines and growth factors from your horse's blood to promote long-term healing and help reduce pain and inflammation caused by osteoarthritis¹.

All three components (plasma, platelets and WBC) are optimal for comprehensive OA management.^{1,2}

Did you know?

Pro-Stride APS works by helping stop the cycle of inflammation and supporting the healing process

IL-1 and TNFα proteins are responsible for inflammation that leads to joint damage and osteoarthritis.

Pro-Stride blocks these proteins to prevent inflammation and joint damage.

X = Inhibited pathways

Why choose Pro-Stride

SAFE FOR THE HORSE

Relief up to a year depending on the case³

Concentrated, all natural healing, powered by your horse

Safe: no negative immune response with repeat injections

Targets the source of your horse's pain and inflammation³

Little to no downtime after treatment and no withdrawal time for competition

Does not permanently incorporate into the joint capsule or cartilage surface

Processed and administered in just 30 minutes

No waiting or second visit required

Portable: administered stall or horse-side

Does not impact advanced imaging interpretation

Only 1 injection needed, not multiple in series

Removing PPP from Step 1.

Performance fueled by scientific evidence

Pro-Stride is a leading choice for enhancing equine performance, supported by these study findings that demonstrate its effectiveness and reliability.

Long-lasting performance

Improvements in lameness seen up to a year³

High A2M concentration

Significantly higher A2M in Pro-Stride compared to Alpha2EQ. Pro-Stride platelet poor plasma byproduct is identical to Alpha2EQ and can be used if extra volume is needed⁴

No need to stop NSAID administration

Pro-Stride APS can be collected if your horse is on Bute, Banamine, Equioxx or Ketoprofen without affecting quality of the Pro-Stride final product^{5,6}

Works with PPID horses

The final cell solution of Pro-Stride is not impacted if your horse has PPID⁷

Protection against synovitis

Effective at protecting joints from damage caused by acute inflammation⁸

Full of growth factors

Pro-Stride contains more growth factors than interleukin-1 receptor antagonist protein (IRAP)⁷

Candidates for Pro-Stride APS

Competitive horses with any concern for career longevity, maximizing joint health or drug withdrawal times

Young horses to maximize their athletic career by minimizing the negative impact on cartilage from chronic repetitive steroid use

Pituitary Pars Intermedia Dysfunction (PPID), metabolic or insulin-resistant horses

Any case of acute inflammation (synovitis). No need to use other therapies first.

Older or geriatric horses

Any horse with a history of laminitis

No foreign body response

Unlike synthetic materials like polyacrylamide gel, Pro-Stride APS is all-natural, made from your horse's blood and will not cause a foreign body response⁹

Pro-Stride APS is in a league by itself

Category of Regenerative Medicine Device	Device	Processing time	Concern for repeat injections (immune response)	Anti-inflammatory proteins	White blood cells	Platelets	Growth factors
APS: Autologous protein solution	Pro-Stride APS¹⁰	<20 minutes	No	✓ Highly concentrated	✓ Highly concentrated	✓ Highly concentrated	✓ Highly concentrated ⁷
PRP: Platelet-rich plasma	Restigen® PRP¹¹	15 minutes	No	✓	✓	✓	✓
	ProVet® APC¹²	3 minutes	No	✓	✓	✓	✓
	Precise- PRP™¹³	None	Possible due to universal donor pool	✓	✗	✓	✓
PPP: Platelet-poor plasma	Alpha2EQ®¹⁴ A2M	20 minutes	No	✓	✗	✗	Limited, not platelet derived
ACS: Autologous conditioned serum	IRAP^{15*}	24 hours	No	✓	✗	✗	✓
Synthetic polyacrylamide gel	Arthramid-vet®¹⁶	None	Yes**	✗	✗	✗	✗
	Noltrex®¹⁷	None	Yes**	✗	✗	✗	✗
Bovine derived elastin & collagen	Spryng®¹⁸	None	Yes	✗	✗	✗	✗
Amnion based (Do not contain stem cells)	AniCell®¹⁹	None	Yes	✓	✗	✗	✓
	RenoVo®²⁰	None	Yes	✓	✗	✗	✓
	Regenaflex-RT®²¹	None	Yes	✓	✗	✗	✓
	Strydaflex®²¹	None	Yes	✓	✗	✗	✓

* IRAP recommends three dose series of injections

**No long-term data available with repeat injections.

APS is the difference

Pro-Stride Autologous Protein Solution is the only concentrated regenerative therapy that contains highly concentrated plasma, platelets and white blood cells, all of which are essential components for comprehensive healing.

A little APS goes a long way.

Meet the rest of the Zoetis Regenerative Medicine family

Restigen® PRP and CenTrate® BMA are additional devices that your veterinarian can offer to address issues with tendons, ligaments and bones that cause lameness.

Restigen® PRP

9x concentrated platelet-rich plasma to improve the quality of fiber repair during the healing process for soft tissue injuries²²

CenTrate® BMA

Harnesses regenerative cells from bone marrow to tackle more severe cartilage, bone or tendon/ligament injuries to help improve the healing process

REGENERATIVE MEDICINE DEVICES

Quick and convenient

All devices can be processed in under 30 minutes, stall-side or at the clinic, during the initial appointment.

Proven results

Clinically proven and effective in managing various equine lameness issues.³
