

## About Our Products

### All Our Products are 100% Made in the USA

From raw materials to manufacturing, SB Tools LLC is committed to solely using American-made materials such as steel, aluminum, and composites in the manufacture of our tools and handles. Our manufacturing operations are based in Colorado, our new home, ensuring quality and supporting local craftsmanship.

### Why We Always Anodize Aluminum Parts

Unlike some competitors, we consistently anodize all our aluminum parts, from handles to universal grinding platform components. Anodizing forms a durable aluminum oxide coating on the tool's surface, significantly extending product lifespan and preventing aluminum residue from transferring to your hands.

### Why We Always Heat Treat & Hardened Stainless Steel Parts

While other manufacturers opt for 300 series stainless steel for ease of manufacturing and cost reduction, we at SB Tools LLC choose differently. We exclusively utilize 400 series stainless steel, hardened to Rockwell HRC 45 through heat treatment. This enhances strength and wear resistance, ultimately improving performance and extending the working life of our products.

## We Stand Behind Our Products

At SB Tools, we take immense pride in our craftsmanship and confidently offer a one-year warranty on every product. Our 100% satisfaction guarantee backs each item. If you find yourself less than satisfied, contact us at [sales@stuartbattytools.com](mailto:sales@stuartbattytools.com).

We promise to replace or refund any tool found to have a material or workmanship defect within one year of purchase. Please note that blades worn down from regular use or resharpening without material or workmanship defects are not eligible for replacement under this policy.

All SB Tool blades are delivered pre-sharpened and ready to use out of the box. On our "FREE VIDEOS AND ARTICLES" page is a series of videos by Stuart Batty on how to sharpen and use each of our blades.

As part of our commitment to innovation, we continuously review our designs and may update specifications or materials to uphold the highest industry standards. Prices are subject to change without prior notification. Our manufacturing facility operates exclusively as a production facility and does not currently accommodate retail sales. However, our new schoolroom will be up and running by October 2024, and we will offer visiting students the ability to buy while attending a class.
