Growing Together. Raising Value

## FOR IMMEDIATE RELEASE

### CID Unveils Innovative Mobile Surveillance Solution to Combat Crime

**Atlanta, GA** – The ATL Airport Community Improvement Districts (AACIDs) is proud to announce the launch of its latest initiative in bolstering public safety: the COMPASS Surveillance Trailer. This state-of-the-art mobile surveillance camera platform offers a 360-degree view of its surroundings, providing unprecedented coverage in our ongoing efforts to maintain a safe environment for residents and businesses alike.

The COMPASS trailer's mobility is a game-changer, enabling rapid deployment to trouble spots and high-crime areas. With this capability, AACIDs Public Safety Officers can swiftly dispatch cameras to incident scenes or relocate them as criminal activity patterns evolve. In collaboration with local law enforcement agencies, the AACIDs is intensifying efforts to address specific issues such as recent car break-ins in the Hapeville area. By coordinating patrol activities and leveraging the advanced capabilities of the COMPASS trailer, we are enhancing our collective response to emerging threats and criminal activities.

“Our commitment to leveraging cutting-edge technology in the fight against crime is unwavering,” said Franklin Allen, Public Safety Director of AACIDs. “With the introduction of the COMPASS surveillance camera trailer, we are empowering our officers and partners with a powerful tool to swiftly respond to incidents and proactively address criminal behavior.”

The COMPASS Surveillance Trailer has represented a game-changing solution in the areas we cover. As of today, the trailer has been deployed in two locations which resulted in a 100% deterrent to car break-ins.

#### Key features of the COMPASS trailer include:

- Rapid deployment capability for on-the-ground situational awareness
- Seamless integration with the CID's existing **FUSUS** surveillance platform
- Telescopic pole-mounted cameras for elevated vantage points and enhanced visibility
- Dual-camera setup, including a steady mount with continuous image feed and a pan, tilt, and zoom-enabled unit with four lenses

The ATL Airport CIDs remain committed to employing innovative solutions to ensure the safety and security of our community. As we continue to invest in technology and collaboration, we are confident in our ability to stay ahead of evolving threats and uphold the highest standards of public safety.

For more information on how our COMPASS surveillance system can benefit you as a property owner in the AACIDs area, please contact:
