

EMRO

Earth, Wind & Solar

EMRO are renewable energy specialists with years of experience in small to large scale renewable energy projects. We are proud to work in the renewables industry in Australia and New Zealand and firmly believe that all local communities should participate in and benefit from the renewable energy transition.

Our expertise is engaging in the early stages of the project and working with developers and EPCs, to de-risk projects and save time and money through the development stage and into construction. Our accurate, reliable data and advice gives developers and EPCs confidence in their site, facilitating successful project delivery.

We can tell you everything you need to know about your site and your project.

Services can be tailored for your project's unique needs. Our capabilities include:

Project management - EPC & client-side project management and advising.

Constructability engineering consultancy - expert advice on what should be considered in construction, what are the time and cost implications and how risks can be mitigated.

Site assessment - Wind monitoring plans, WTG Layouts (preliminary & optimisation), Wind Resource Assessments, high-level energy yield assessments.

Preliminary design - basic layout and reticulation.

Pile height design - rapid turn around to prevent contractor stand down.

Early works and pre-construction services - everything required to get you into construction, tailored for your needs.
