

Translucent  
**SOLUTION**

## APPLICATIONS

- Ideal for large spaces to be covered (max 5 x 20m)
- Lighting could exist behind pvc, since it is translucent.

## FEATURES

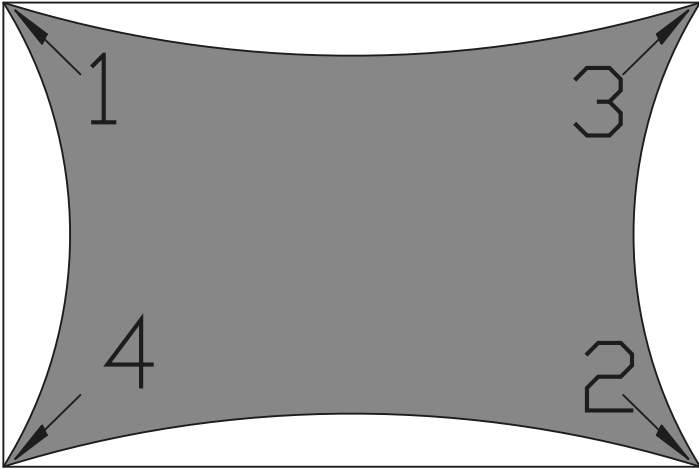

- Translucent PVC meshes are manufactured 10% smaller than the size of the box where it will be placed.
- The screen will be heated on site using LP gas and an industrial heater.
- The ideal preparation is to place a frame behind the drywall and reinforce it.
- The PVC perimeter rail will be fixed to the finished box, some time before the mesh, so that it does not get dirty.
- The perfect functioning of the luminaires must be verified before tensioning the ceiling.

## BENEFITS

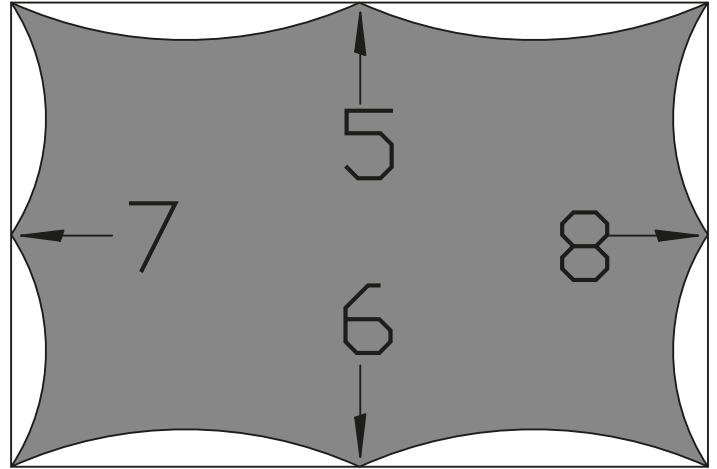

- Reduced cost of maintaining services in the ceiling plenum.
