

NEW Sterile, Ready to Use **Prontosan[®]** Wound Irrigation Solution

with Polyhexanide (PHMB) and Betaine (Surfactant)

From First Cut to Closure

Prontosan[®] enhances the experience and prolongs activity with no limit on contact time or application frequency. Most irrigation solutions require a thorough saline rinse after limited contact time halting the effect they may have.

Safe

Effective

No Rinse

No Rinse, No Wait...Irrigate and OperateTM

Stay on the Offense with **Prontosan®**

Exclusively
Distributed By:

Two Powerful Active Ingredients: **Betaine** + **Polyhexanide (PHMB)**

Betaine (Surfactant)

Surface-Active Cleanser that Provides
Immediate Debridement.⁵

Polyhexanide (PHMB)

Broad spectrum activity within the solution against
Gram+ bacteria, Gram- bacteria, various fungi and viruses.

As a true **No Rinse** irrigation solution, Prontosan® is not limited in dwell time and can be used intermittently throughout the case and before wound closure. This allows the surgeon to implement an infection control strategy for the **duration** of the procedure for **continuous, uninterrupted activity**.
