

SYNTHETIC WINCH LINE SYNTHETIC WINCH LINE EXTENSION TREE SAVER

- Stronger than steel yet extremely light
- Integrated shackle
- Wraps around most anchor points

Winch Line

Winch Line Extension

Tree Saver

LockJaw® synthetic winch lines and winch line extensions are the next generation winch line that features an integrated shackle. Made from high strength synthetic fibers, LockJaw products are stronger than steel yet vastly lighter. The flexible shape provides the greatest versatility in the market. The shackle easily wraps around all kinds of anchor points. The synthetic fibers create less damage while working around delicate components. The exclusive lock securely holds the shackle closed when in use. If the working load is exceeded, the winch rope will drop instead of dangerously whipping around. This eliminates the chance of a metal hook launching as a projectile in the case of failure. To protect trees, LockJaw tree savers are available in sizes corresponding to all LockJaw winch lines. Not rated for lifting. Patent pending. Made in USA.
