# THE PROJECT IS HERE!

## COMMUNITY DEFIB PROJECT GLENORIE

As members of the Glenorie community, we are aware that we are a long way from help in the event of an emergency, especially a medical emergency.

Community Defib Project is a not-for-profit organisation that installs community accessible defibrillators to at risk communities.

An AED (automated external defibrillator) is a device that can be used by anyone to save the life of someone who suffers a sudden cardiac arrest and is unconscious and not breathing. Without the device, chance of survival is slim.

We would like to make our community safer and protect our loved ones by installing 24/7 community accessible defibrillators as a part of the Community Defib Project. Our goal is to ensure that every community member is no more than 10 minutes from a life saving AED. The project will provide not only the device, but also education and resources to make sure you know what to do in a medical emergency.

**During a sudden cardiac arrest, with every minute that goes by without a defibrillator, the victim's chance of survival is reduced by 7-10%**
