Benjamin Goodman

DIED aged 32

covid vaccine:
Johnson & Johnson

Mr. Benjamin Goodman went to a Walgreens pop-up COVID-19 "vaccine" clinic in Chelsea, New York on Saturday, March 13 (2021). He received the experimental Johnson & Johnson viral vector shot, according to his stepmother Pamela Goodman. Benjamin texted his father, Jeff Goodman, and told him he received the shot. The family was not happy to hear the news. Soon thereafter, Benjamin had a severe headache and started feeling ill. He fell asleep, hoping the symptoms would pass after some rest.

Mr. Goodman woke up at 1 a.m. with a high fever and chills. His fiancée, Lindsay Janisse, was awakened to Mr. Goodman having seizures at 4 a.m.. Ms. Janisse called 911 as Mr. Goodman went into cardiac arrest. Paramedics tried, unsuccessfully, to revive him on the scene. Mr. Goodman was rushed to a nearby Mount Sinai Hospital. But he was pronounced dead at 6:05 a.m. Sunday morning, March 14.

Dear friends, there is nothing that can bring our son Ben back. Jeff, Natasha , Carson and I cannot let the truth of what happened to Ben pass with any of you thinking he had some type of underlying health problems that caused his death. He didn't. Ben just celebrated his 32nd birthday, was working full time, golfing, traveling and living the best life he could in NYC. Ben knew our family history with vaccines. He knew. But everyone has been pushing the experimental travel pass and so many things we know and many others do not.
