Police are investigating the case of a 15-year-old girl who died several weeks after her COVID-19 jab, reports local news outlet Mainwelle. Cheyenne Braun suffered a cardiac arrest just days after the vaccine and was rushed to intensive care and put on a ventilator before dying on Tuesday, November 16th.

Cheyenne's mother, Kerstin Braun, reported on her daughter's tragic death on Facebook and published a statement from Cheyenne's sister, saying that Cheyenne had no pre-existing health issues and that it was probably inflammation of the heart muscle that caused her sudden death.

According to local media, doctors have not ruled out vaccine-related myocarditis as the cause of death. Police headquarters in Hollfeld has since confirmed that an investigation is ongoing.

The death of the 15-year-old comes several weeks after a 12-year-old boy in Cuxhaven died just two days after receiving the Pfizer COVID-19 vaccine.
