Parents denounce vaccine after death of healthy 13-year-old

Brazilian news outlet Revista Oeste cited family members as saying that Vanessa Martins Figueiredo received her first shot on Nov. 9 and developed Bell's Palsy five days later.

Vanessa's mother, Alice Romano, said in a Facebook post: **"My daughter just died because of the Pfizer vaccine"**.

Romano posted this message on Jan. 10, the day of her daughter's death:

"I come to alert all mothers that my daughter is dying because of the vaccine. She is 13 years old. A beautiful girl full of life is dying because of this wrecked vaccine. I don't wish the suffering I am going through on any mother. Take a look at these pics and look at what this disgrace of a vaccine did to my girl."
