

Institute of Opticianry & Technology, LLC

Mission Statement

Our mission in creating the Institute is to offer a comprehensive, student-centered, multilevel approach to learning opticianry. Our curriculum was developed based on the need for a program that mirrors traditional in-person instruction where no school exists. Whether the candidate is enrolled in an apprenticeship, requires an adjunct to their current dispensing program or clinical optometry program, IO Tech will meet their individual needs from the basics to mastering optics, opticianry and beyond. We accomplish this through a blended interactive learning model that includes coursework, videos, virtual modules, as well as access to facilitators. The program addresses the necessity for those who may need more in-depth learning experience or those that have had formal education or training but require more. Our goal is to educate, empower and support the learner at every level of their career. We are passionate about facilitating the learner, encouraging formal education where available and offering the unique value of an online program that aligns with your achievement goals: your future, our vision.
