

## Science Fiction, or Future Fact

Following the award winning  
“AGENDA 2060; The Future as It Happens”,  
described by critics as a *laser-focussed, irresistible lampoon*  
of woke culture, comes this eye-opening follow-up.

It's 2062 and the World Government's rules for maintaining  
authoritarian control are starting to unravel,  
needing urgent tightening

The elite have a master plan to finally wrest full control over  
the unsafe thoughts and speech of the world's population.

Can Artificial Intelligence learn to control mankind's evil intentions  
— or will it decide to become the ruthless enslaver itself?

After two years in space, will Alexa Smythe have a message of  
hope for the 'World on Fire' cultists who believe  
Earth is doomed and only she can save it?

Would Elon Musk, Bill Gates or George Soros recognize themselves  
in this alarmingly credible, thought-provoking future world?

This is the future as it happens, a world  
where Artificial Intelligence and Space Travel  
are about to change lives forever.
