

Village of Birds Point.

Spring preparedness plan

-Following actions will be taken to control spring run off from ditches within the village to prevent flooding of homes in low lying areas

This does not deal with issues of ice and or water levels on the lake as this would be covered within the provincial guidelines.

-1) All culverts will be inspected in late fall to ensure no damage and any blocked ends.

-2) Prior to warmer temperatures all culvert ends will be dug out and frozen culverts steamed out.

-3) If conditions warrant a pathway will be plowed in ditches to ensure water flow.

-4) Culverts will be inspected daily to ensure flow

-Homes in low lying areas should have snow removed from around foundations to prevent water seepage into homes. This is the homeowner's responsibility

- All homeowners should ensure that sump pumps are operational.
