

CipherDriveOne

Instructions For Post Hard Drive Serial Number Capture For License Keys.

The utility is included in the latest version of CipherDriveOne V1.2.2.8 and later. The cdokey utility will capture only the Digistor hard drive information required to generate a serial number.

Here are the steps to use the cdokey utility:

1. Use the CipherDriveOne software in the normal install procedure. Boot the USB drive to the console window.
2. See Graphic A below: Type the command (all lowercase): cdokey
3. Follow the instructions.
4. See Graphic B below: A file will be created on the USB - CDO_Key.txt
5. A backup file will be created on the USB - CDO_key_mmddyy.txt
6. You will be prompted: "CipherDrive key capture completed. Would you like to finish? (Y/N)." Answer Y.
7. The machine will shut down. Wait for the machine to shut down before you pull the USB key.
8. Go to the next machine you wish to capture the information. Follow steps 1-7.
9. The disk info will be appended to the CDO_Key.txt file every time you use the utility.
10. When finished, save one copy of the CDO_Key.txt file for your records in a safe place.
11. Send us the CDO_Key.txt file and we will generate you:
 - a. An updated license string for machines you have already installed.
 - b. An updated license file to use for machines that have NOT been installed.

/ #
/ # cdokey
This utility is used to capture the hard drive information to generate a license key for CipherDriveOne.
The information will be captured to CDO_Key.txt on your USB key.
A backup copy is also saved in the same location. Continue (Y/N)?
/dev/nvme0 : Disk Information added successfully
CipherDrive key capture completed. Would you like to finish? (Y/N) : _
```

SecurityToken	2/22/2021 9:30 PM	File	1 KB

Recommended steps:

1. **INSTALLED:** Use cdokey utility for all the machines you have installed and send the CDO_Key.txt to us. We will send you back one license string to upgrade the license in the software. No re-installation is necessary. You just login to the Settings Console>Maintenance>Upgrade License inside the product. Insert a USB key with the license string file and CipherDriveOne will read the updated license string and update the software automatically.
2. **NOT INSTALLED:** Use cdokey utility to capture all the machines that are not currently installed. I recommend batches of 20 or 50. Send us the CDO_KEY.txt and we will send you back a permanent license key (you just replace the evaluation license key) to use at the install and thus you will not have to update the license after installation.
3. **PRE-INSTALLED BUNDLE:** The CipherDriveOne pre-installed bundle will have a permanent license key installed. A backup license key will be given to you by the CipherDriveOne or Digistor sales representative.
