MEP Equipment Supplies

MEP (Mechanical, Electrical, and Plumbing):

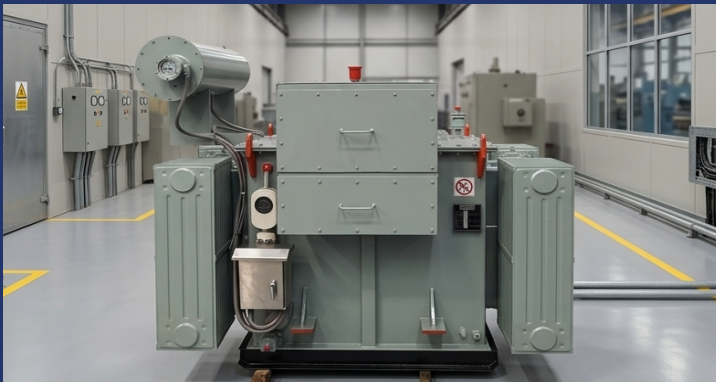

Global Procurement and Sourcing of Standard **Electromechanical Machinery** for **Rail & Metro Systems**.

We supply high-specification, standard-compliant **Mechanical, Electrical, and Plumbing (MEP)** equipment engineered for underground metro networks and heavy transportation hubs.

Relying on our international logistics footprint and manufacturing capacity, we deliver robust, certified transit hardware directly to project sites worldwide.

MEP Equipment Supplies

Brief examples about our work:

Mechanical & Ventilation Systems: Air circulation and climate control equipment built to withstand a high-pressure demands.

- **Tunnel Jet Fans:** Standard axial flow fans for longitudinal ventilation and smoke extraction.

- **Station Air Handling Units:** High-capacity modular units for passenger zone cooling and filtration.

- **Fire & Smoke Dampers:** Certified multi-blade steel dampers for airflow isolation and fire containment.

Electrical & Power Distribution: Standard-compliant power distribution and backup systems for underground infrastructures.

- **Cast Resin Dry-Type Transformers:** High-safety voltage step-down units encapsulated in epoxy resin for fire-proof station rooms.

- **Medium Voltage Switchgears:** Mo-

MEP Equipment Supplies

Brief examples about our work:

dular metallic enclosures housing standardized circuit breakers and electrical protections.

- **Industrial Emergency Generators:** Heavy-duty diesel gensets for automated backup power continuity.

Plumbing, Drainage & Fire Networks: Prefabricated fluid handling packages tailored for subsurface water management and station safety.

- **Sump Pump Skids:** Pre-assembled dual or triplex centrifugal pumping racks for continuous station drainage.

- **Fire Pumping Stations:** Standard compliant pump modules (main, diesel backup, and jockey pumps) for automated sprinkler networks.

- **Valves & Piping Manifolds:** High-grade flanged iron or carbon steel pipes, butterfly valves, and check valves for heavy hydraulic setups.
