Bridge Construction Support Vessels

We specialize in the manufacturing, processing, design, and development of large-scale steel structures, including **naval products**, customs security systems, **metallurgical equipment**, **mining machinery**, hydroelectric systems, and **fully built ships**.

The company has obtained, among others, the following **qualification certificates**:

- **Military equipment** manufacturing and quality management certification.
- **ISO 9001** quality management system certification.
- **Naval product** research and manufacturing certification.
- **ASME welding certification** in accordance with the Japanese Classification Society (NK) and American standards.

In the field of ship design and construction, we offer a comprehensive range of capabilities and services tailored to the needs of the projects, **particularly in support of bridge construction**.

Bridge Construction Support Vessels

Brief examples about our work:

Design and construction of barges and cargo vessels

- Motorized or towable configurations available, depending on operational requirements.
- Customized dimensions, load capacities, and deck layouts to suit project-specific logistics.

Versatile vessel designs

- Flat-deck barges, crane barges, spud barges, hopper barges, dredger, etc.
- Adaptable for cargo transport, equipment support, or specialized marine operations.

Underwater concrete placement solutions

- Controlled concrete pouring at the seabed.
- Ideal for construction of underwater structures such as bridge pillars or foundations.

Bridge Construction Support Vessels

Brief examples about our work:

Material lifting and handling support

- Equipment and barge platforms designed for lifting and transferring materials to bridge decks under construction.
- Integration with cranes, winches, and modular transport systems.

Purchase and rental options

- New builds, second-hand vessels (subject to availability), and flexible rental plans.

Technical consultation and customization

- Support for technical feasibility studies, vessel design adaptation, and compliance with maritime regulations.

**Due to manufacturing lead times and limited availability of second-hand or rental vessels, please inform us of your future needs as soon as possible.*
