

BEST PRACTICES ARE A 911 CENTER'S BEST FRIEND

MPS Associates experience in consulting and public safety includes:

- Land mobile communications systems and equipment
- Radio system review, planning and implementation
- Conventional and trunked radio system design and implementation of VHF (155 MHz), UHF (450 MHz), and 700/800 MHz
- Microwave point-to-point to multipoint microwave networks
- Experienced in the design and implementation of systems for area and countywide public safety applications
- Wide area voice radio coverage and propagation mapping development
- Wide area specialized volunteer fire paging systems
- Radio control console systems design and implementation
- Fire Station Alerting
- Weather Siren Alerting
- Support for 911 Consolidations
- 911 PSAP development and construction

DON'T GO IT ALONE!

We are system technology neutral, the decisions related to the future of your operations are yours, with the best information and support available. MPS would like to be your consultant.

When developing a critical project for your member agencies, citizens, and other constituents, solid expertise is available to you for your projects.

Let us be your advocate for the best possible project outcome.

Having a reputable and technically competent partner at your side ensures that all aspects of your project will be well developed for appropriate size and scope, as well as closely monitored for fiscal diligence and future sustainability.

All of the MPS associates maintain Memberships and Certifications with the relevant industry support associations such as APCO, Federal Communications Commission, and civic oriented radio communications organizations (Amateur Radio).

- FCC Antenna Tower Registration Support
- NEPA SHPO Study Coordination

PSAP Planning and Support Services

- PSAP Design Planning
- Dispatch Furniture Planning
- Electrical and Grounding of PSAP and Radio Sites
- 911 and Radio Recording Systems

Radio Interoperability Continuum The way to common communications for Public Safety

Mazzitello Professional Services provides a unique blend of technical expertise combined with real-world experience in public safety. The MPS / RFCC resource individuals, Mike Mazzitello (MPS), Rey Freeman and Dave Pieczynski (RFCC), have in some capacity been involved in the day-to-day operations of public safety systems throughout the country. They have served as 9-1-1 supervisors, PSAP managers, 9-1-1 board members, radio system managers, frequency coordinators, and dispatchers.

Additional experienced individuals with wide-ranging skills are available as resources are needed to support any project scope.

The time has come for many local jurisdictions to make critical choices on technology devoted to your operations solely, or to consider a migration to a shared interoperability Radio Network which may be available. There is a RIGHT answer for your community, and that can be determined with skilled representation by MPS.

Statewide System in your future? How would it affect your agency? How do you compare Statewide to Locally owned?

Many states now have some sort of state-wide public safety systems in play or under consideration. What this means to you is that you may have an additional option for your next step.

MPS will investigate all options for technologies for all possible solutions to your communications project needs. This would include pre-RFP issuance, vendor interviews, as well as a full fledged Request For Proposal (RFP) event with all relevant vendors in attendance.

Statewide, Regional and Local Expertise

- MPS and Associates were deeply involved in the Minnesota (ARMER) radio system providing many of the local County, City, and State Agency consultation services as that project came to full implementations.

- As individuals we were involved with early entrants into the Illinois statewide system (STARCOM21), working to assist local Public Safety and elected officials through the complex processes of understanding the new world of shared technology across political and jurisdictional boundaries.

- The State of Iowa (ISICS) P25 system is similar in scope and complexity; the Question of the Day is...should you, or shouldn't you....join the State system, and how would (or should) your agency do it given budgets and local areas system coverage?

Project support is available on an as needed basis with project costs managed through time and material billing, or fixed cost project fees with "cost not to exceed" project pricing.
