

We have 3 options:

1. **The DIY kit**, which comes with all the oven parts, including the refractory plastering materials, demonstration video, assembly manual and instructions for its best functioning. Please also note that the DIY kit does not come with the concrete base or block stand (the Oven stand). This means that you can build one to your own design. e.g. in brick or stone, round or square etc. but to certain specifications.

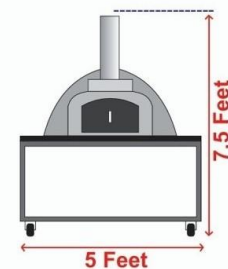

The DIY Kit:

CONTENTS OF THE CRATE

- 1) Interlocking Oven Dome with Vent
 - 2) Fire Brick Oven floor
 - 3) Oven Door
 - 4) 6" Diameter Stainless Steel chimney Anchor Plate
 - 5) Ceramic Blanket for Dome insulation (3 Rolls)
 - 6) Ceramic Board for Floor insulation (3 Sheets)
 - 7) Plastering Mortar (Refractory Mortar x 3 Bags, Accoset 20 Kg, Fire Clay 6 Kg & Stucco x1 Bag)
 - 8) Chicken Mesh (20 g, 3 Meters)
 - 9) Screws & Washers
 - 10) Tightening Wire, 16 Gauge, (150 gms)
- **OPTIONAL (Extra Cost) -**
- 1) Additional GI Chimney with Rain Cap
 - 2) Oven Kit.
 - 3) Gas Connection set & Manual
 - 4) Metal Stand
 - 5) Concrete Slab x 4
 - 6) Infra-Red Thermometer

Below Sketch

the oven dimensions,
excluding the chimney.

† CHIMNEY

The oven comes with a 6 Inch Diameter & 8 Foot Height chimney with rain cap.

2. **The On-Site Build**. If you prefer, we can come and build the oven for you, on site (depending on location and timings), for which, apart from the DIY Kit, there will be an additional charge. Once it's built, and it's curing, we can leave you with instructions and video demos on how to do the initial firing and how to cook your first pizza!

For The DIY and On-Site options, with a block stand and concrete base already in place (required), the oven needs less than a day to assemble. Following this the 4-5 days curing (depending on location) and 4-5 days firing (4-5 hours or per day). So within 8-10 days, your oven is ready to roll.

3. **The Pre-Assembled** Oven that gets transported from our base workshop, already cured and fired. It comes on a wheeled, metal block stand and would be delivered to your site. Once in place with wheel-brakes locked, it then takes just an hour to fire up, to give you a quick cooking demo.

IMPORTANT: The pre-assembled oven is made for both outdoor and indoor functioning, but in order to have it indoors, you will require an entrance space of 6ft wide x 8ft ft high.

PLEASE ALSO NOTE that delivery of the pre-assembled oven is not always viable, depending on location. In this case we recommend the DIY option.

All our ovens come with Maintenance Manual, Cooking Manual, Safety and Limited Warranty details. An optional, add-on Oven Tool Kit is also available.
