# PINE CREEK

Angus Ranch

## *Welcome to the 32nd Annual Pine Creek Angus Ranch Spring Bull Sale*

We appreciate your interest in our cattle and breeding program.

This is the first set of bulls we have had to offer by the \$165,000 sire, Sitz Resilient 10208. The yearling bulls and heifers sired by him look very promising as a sire group. We registered 49 Resilient calves born in the spring of 2021. We then decided to purchase an additional 100 straws for the 2022 calf crop.

We always strive for balanced traits, but maternal traits are our top priority. Our cows must be moderate framed, easy fleshing, have a level udder with short teats, adequate milk, have good disposition, and breed back every year.

In our immediate area we were extremely dry last summer, and so far, this winter we have had little moisture. We bagged very little alfalfa, so we are using alternative feed sources to supplement our ration including: popcorn stover, millet straw, soy hull pellets, and Nutra-Lix from M/L Feeds. The cattle also get 3 ounces of Dakota Breeder Mineral with rumencin from J&R Feeds. Despite the drought this past year, the cattle have done well.

We are praying for, and looking forward to, a wetter year ahead. Along Pine Creek we are blessed to have an abundance of well water, but we need rain for the grass to grow.

You are always welcome to stop by the ranch for a visit, and to see where and how the cattle are raised. The ranch is located 27 miles west of Faith, or 48 miles east of Newell, and 8 miles south of Maurine.

Our family would like to invite you to come early on sale day to see the bulls and have lunch with us before the sale.

Dollar value indexes, or \$Values, are a tool used to select for several traits at once based on a specific breeding objective. An economic index approach takes into account genetic and economic values as well as the relationships between traits to select for profit.

## American Angus Association \$Value Indexes

### Maternal Weaned Calf Value (\$M)

is an index expressed in dollars per head, predicts profitability differences in progeny due to genetics from conception to weaning. \$M is built off of a self-replacing herd model where commercial cattlemen replace 25% of their breeding females in the first generation and 20% in subsequent generations. Remaining cull females and all male progeny are sold as feeder calves. Increased selection pressure on \$M aims to decrease overall mature cow size and improve foot structure and fertility while maintaining weaning weights consistent with today's production.

### Beef Value (\$B)

is an index expressed in dollars per carcass, facilitates simultaneous multi-trait genetic selection for feedlot and carcass merit. \$B represents the expected average differences in the progeny postweaning performance and carcass value compared to progeny of other sires. This index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a quality-based carcass grid.

### Combined Value (\$C)

is an index expressed in dollars per head, includes all traits that make up both \$M and \$B with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid.
