---

September 22, 2025

The Hull water well which provides water to both Hull and Daisetta will be placed out of service for an emergency repair on Tuesday, September 23, 2025. The repair time is estimated to be 24-48 hours, although the time could vary depending on the difficulty of the repair.

During this time, we will be relying on water stored in the water tower and ground storage tanks to provide water to every home and business in the two communities. We need to be very conservative with our water usage during this process, since the well will not be in production during the repair.

We will be issuing a boil water notice after the repair is complete, as required by TCEQ, while we await testing results. This is normal procedure during a well repair, and no cause for alarm.

We will update as the repair process continues.

Thank you,

Hull Fresh Water Supply
