

Great O Plus Omega Supplements

Poultry Impact and Inclusion Rates

Great O Plus Omega supplements help balance Omega 6:3 fatty acid ratios that improve flock performance, immune response, and longevity in production while reducing chronic inflammation and environmental stress. That results in a healthier bird..

Great O Plus Omega supplements use dry extrusion technology to deliver Omega 3 unsaturated fatty acids for more digestible nutrients. We incorporate both flax seed and marine microalgae to supply a balanced blend of Omega 3 fatty acids.

In layers, egg production increases with improved fatty acid content in the egg

All bird species respond well to Great O Plus supplements in their daily ration, available in bulk or by the bag.

Poultry Class	Feeding Range	Feeding Guidelines
Layers	5.0 to 15.0% of the diet	Adjust for bird and feeding conditions
Broilers	2.5% to 8.0% of the diet	2.5% of diet up to 3 wks prior to market and 8% until harvested
Layer Omega 3 egg enrichment	5.0 to 15.0% of the diet	Adjust to desired Omega 3 level in eggs (ex. 10% for 200 mg Omega 3)
Broiler Omega 3 enrichment	Minimum of 8.0% of the diet	Increase to 8% of the diet for the last 3 weeks prior to market

Note: Feeding levels vary depending on length of feeding period, environment and animal conditions

"We saw increased production and more longevity in our flocks,"

Eldon Kreider
Manheim, PA

"The ROI shows that it's been well worth it."

Bryan Mussard
Dillon, MT
