## Why?

As technology evolves and global threats grow more complex, the US MASINT Foundation was created to address the challenges of a new era. There is a critical need for a community that embraces innovation, adapts to emerging threats, and builds a sustainable future for MASINT.

Our vision is to create an inclusive dynamic community built on collaboration and forward, thinking approaches to improving MASINT Scientific and Technical Intelligence (S&TI) in operations. Our goal is to ensure MASINT's long-term impact by fostering a practitioner network that thrives on innovation, develops new methodologies, and supports the ever-evolving demands of national security. In this new era, we believe that the traditional models must evolve by partnering with the government, Industry and academia. The Foundation is committed to shaping the future of MASINT, making it more understandable, relevant, discoverable, effective, and accessible to meet the challenges of tomorrow.

US MASINT Foundation
31 S. Main Street #426
Dayton, Ohio 45402
