

CTRL Key Zooming

Ever wanted to see something on a website just a littler clearer, or needed to zoom in to see what you're writing on Microsoft Word a little better? Use the CTRL key trick!

Simply hold down the CTRL key on your keyboard, and then press the + or – key at the same time on the keyboard to zoom and out.

Alternatively, you can use your mouse scroll wheel while holding down the CTRL key on the keyboard to zoom in and out as well!

On a Mac? All the same tricks apply, just use the Command key instead!
