PADI DOLPHIN SEMI-CLOSED REBREATHING DIVER SPECIALTY DIVER COURSE

The Dolphin Semi-Closed Rebreather (SCR) is a cutting-edge diving technology designed to offer longer dive times, reduced gas consumption, and a quieter underwater experience. It's ideal for both recreational divers and professionals looking for an efficient, reliable, and silent way to explore the depths.

This course covers the knowledge, set up procedures, dive techniques and maintenance requirements for using a Dolphin Semi-Closed Rebreather.

To conduct a Semi-Closed Rebreather Course — Dolphin, include the following:

1. The advantages and disadvantages of using a Semi-Closed rebreather.
2. Semi-Closed rebreather components, functions and enriched air requirements.
3. Planning a semi-closed rebreather dive.
4. Semi-Closed rebreather diving hazards and emergency procedures as well as problem prevention, recognition and handling.
5. Semi-Closed rebreather assembly, pre-dive check and maintenance procedures

PADI “DOLPHIN” SEMI CLOSED REBREATHER DIVER SPECIALTY DIVER COURSE

Total dives – 3 dives + 1 leisure

Prerequisite – Advanced Open Water Diver
and Nitrox Specialty Diver

Details – Hands – On lesson and mostly
practical

WHAT IS THE REQUIREMENT TO BECOME UNDERWATER NAVIGATION SPECIALTY SCUBA DIVER?

- 15 years old and above for PADI Advanced Open Water Diver certification.
- Enriched Air Diver certification
- 10 logged dive Open water

CONFINED WATER TRAINING

By the end of the confined water dive, student divers must be able to:

- Demonstrate the GGG (Gas, Gauge, Gag) step prior to entering the water.
- Demonstrate the assembled unit one way valve check.
- Set the exhalation bag overpressure valve (exhaust valve) for the desired gas volume in the unit.
- Establish proper weighting using the Dolphin/Atlantis semi- closed rebreather.
- Perform an underwater bubble check for a buddy.
- Switch to the bailout system while underwater without flooding the breathing loop.
- Switch from the bailout system to the Dolphin without introducing water into the breathing loop.
- Perform a bag purge.
- Demonstrate proper buoyancy control while swimming underwater.
- Reduce counter lung volume underwater by exhaling through the nose

OPEN WATER TRAINING

After the open water training, you will be able to:

Familiarize divers with the skills, knowledge, planning, organization, procedures, techniques, problems, hazards and enjoyment of diving with a Dolphin Semi-Closed Rebreather. The Semi-Closed Rebreather — Dolphin specialty course is intended to serve as a training program that emphasizes adventure and fun while establishing the benefits of Dolphin Semi-Closed rebreather diving and developing the skills required.

The goals of PADI Dolphin Semi-Closed Rebreather training are:

- To develop the student's knowledge of Dolphin semi closed rebreathers — when to use Dolphin Semi- Closed rebreathers, Dolphin Semi - Closed rebreather accessories, their maintenance, and how to make minor repairs.
- To develop the student's ability to perform the skills needed, or that may be needed, when diving in a Dolphin Semi - Closed rebreather.
- To enable the student diver to plan, organize and conduct dives using a Dolphin Semi-Closed rebreather

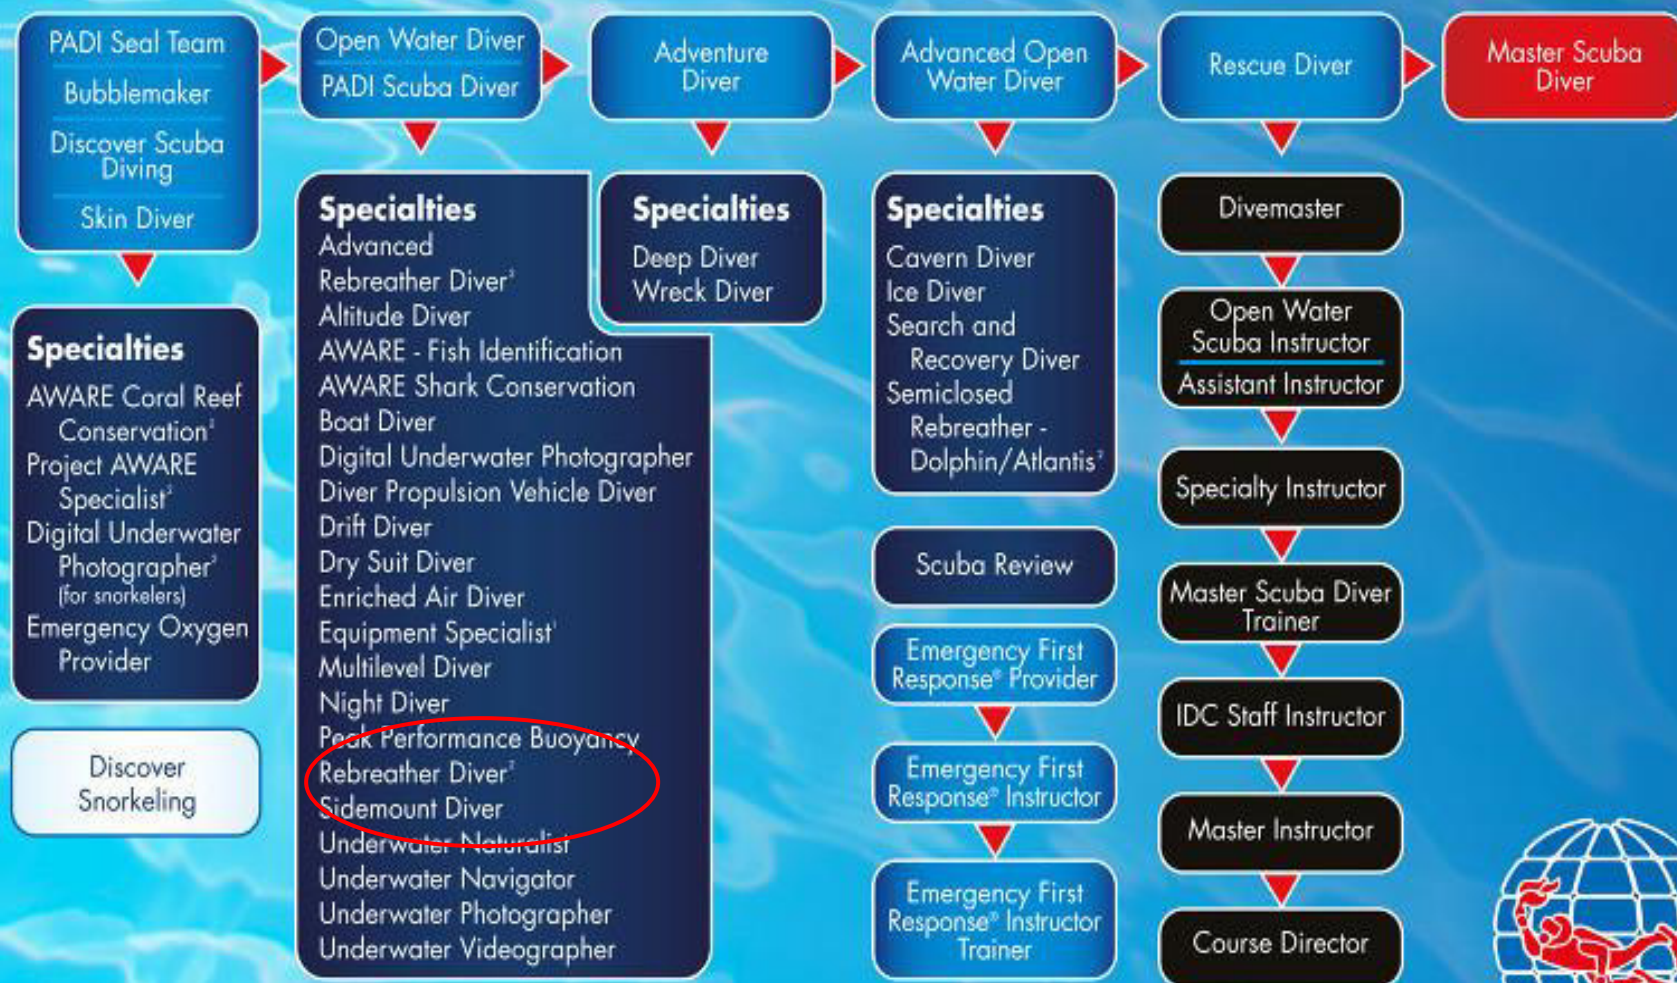

DOLPHIN SCR

The **Dolphin Semi-Closed Rebreather** offers an efficient, reliable, and quiet solution for divers who want to maximize their underwater time. Whether you're a recreational diver looking to extend your dive times or a professional who needs stealth and gas efficiency, the Dolphin SCR is a versatile tool designed to enhance your diving experience. With proper training and maintenance, it offers a safe, cost-effective way to explore deeper and longer than ever before.
