

The Beast system

In this paper, I expose the beast financial system and when we can expect it's roll out.

Bear in mind, I am in no way making any predictions nor am I claiming to be a prophet so please don't assume that on my behalf.

I am simply sharing real world information as to the actual direction we are heading, what has been planned by men, and when the timeline the powers at be have determined the transition should take place.

The digital system encompassing Central Bank Digital Currencies (CBDCs), stablecoins, blockchain, tokenized assets, digital IDs, and digital driver's licenses represents an interconnected framework for a fully programmable, traceable global economy, where traditional cash and physical identifiers are supplanted by centralized digital controls.

CBDCs function as government-issued electronic money, backed by central banks like the Federal Reserve, enabling instant, real-time payments and settlements through digital wallets or accounts, with transactions recorded on secure ledgers to enforce monetary policies, track spending, and potentially limit uses based on programmable rules—such as expiring funds or restricting purchases.

Stablecoins complement this by acting as privately issued digital tokens pegged to stable assets like the US dollar, maintained through reserves of fiat or securities, allowing seamless cross-border transfers and trading while mimicking currency stability; they operate on blockchain networks, where users redeem tokens for underlying value, fostering a hybrid public-private payment ecosystem.

Blockchain serves as the foundational technology, a decentralized yet increasingly centralized (in practice) ledger of chained blocks secured by cryptography, where each transaction is verified by network consensus, ensuring immutability and transparency but enabling comprehensive surveillance when tied to identities. Tokenized assets extend this by converting real-world items—like real estate, art, commodities, or funds—into fractional digital tokens on the blockchain, tradable 24/7 without intermediaries, democratizing access but centralizing ownership records in digital form.

Digital IDs and driver's licenses integrate as verifiable credentials stored on mobile devices or wallets, using biometric or cryptographic proofs to authenticate users for services, payments, or access, often linked to blockchain for cross-border interoperability, creating a unified profile that gates economic participation.

This system's rollout targets full enforcement by 2030 in various global contexts, with pilots and phased implementations accelerating; for instance, the EU's Digital Identity Wallet is slated for mandatory adoption by 2026 in member states, while US states aim for widespread mobile driver's license programs by mid-2025, expanding to over 30 jurisdictions by 2026, and global schemes covering billions through initiatives like India's Aadhaar or emerging frameworks in Africa and Asia.

Data centers, essential for processing blockchain transactions and storing vast digital ledgers, are undergoing massive construction booms, with projects like Vantage's Milan campus launching in 2026, GreenSquareDC's Sydney site completing late 2026, and larger US facilities targeting 2028 amid power and permitting delays that compress timelines to 16-20 months via modular builds.

Donald Trump has actively pushed this agenda through a 2025 executive order promoting US leadership in digital assets and blockchain, while banning CBDC issuance until potentially after 2030, framing it as a path to making America the "crypto capital" by encouraging private innovations like stablecoins and tokenized assets, and convening Big Tech for pledges on self-powered data centers to support AI and crypto growth—positioning these as economic boosters against global rivals. **NOTE:** *See the PDF Donald Trump for a full disclosure on Trumps involvement with this beast system.*

When viewed against Revelation's beast system, this exposes striking parallels: a unified mark-like digital ID required for transactions, enforced through blockchain's indelible records and exclusionary mechanisms, where refusal means economic isolation, mirroring the text's warnings of a deceptive, all-encompassing regime under a false authority that demands allegiance for survival.

In the Book of Revelation, the beast rising from the sea, empowered by the dragon, establishes a global system of control that extends to economic transactions, mandating that all people—small and great, rich and poor, free and slave—receive a mark on their right hand or forehead to participate in commerce. Without this mark, which is the name of the beast or the number of its name calculated as 666, no one can buy or sell, creating a unified financial regime under the beast's authority that enforces worship and allegiance through exclusion and coercion.

This system is supported by a second beast from the earth, which performs signs to deceive inhabitants, commanding them to make an image of the first beast and giving it breath to speak, further solidifying the economic stranglehold by killing those who refuse the mark. The text portrays this as a pinnacle of deception and blasphemy, contrasting with the Lamb's followers who endure patiently without compromising, sealed instead by G-d for protection amid the ensuing judgments.

Interpreting this within the book's framework, the beast's financial system symbolizes ultimate worldly power that tests true faithfulness, blending idolatry with everyday survival to lure people away from G-d toward Satan's counterfeit kingdom.

It warns of a time when economic participation demands spiritual compromise. The Book of Revelation declares unequivocally that those who partake in the beast system by worshiping the beast or its image and receiving its mark—calculated as 666—will face irreversible divine judgment without forgiveness, destined to drink the full, undiluted wine of G-d's fury poured out in the cup of his wrath. They will be tormented with fire and burning sulfur in the presence of the holy angels and the Lamb, their smoke ascending forever and ever, with no rest day or night for those who bear the mark, symbolizing an eternal separation from G-d's mercy as the second death claims them in the lake of fire alongside the beast and false prophet.

G-d's true followers are summoned to come out of Babylon the great, (USA) the mother of prostitutes and abominations who corrupts the earth with her adulteries, so they do not share in her sins or receive her plagues, much like wheat harvested and separated from the chaff in the reaping of the earth, distinguishing the righteous from the wicked in a final winnowing of good versus evil. These faithful ones, are commanded to refuse the beast's deceptive system, enduring great tribulation and conquering by the blood of the Lamb and the word of their testimony; they do not love their lives even unto death, sacrificing all worldly security and facing martyrdom rather than compromising with the antichrist's regime, ultimately standing victorious on the sea of glass and reigning with Christ in eternal reward.

The Book of Revelation, while included in the Christian New Testament, can be viewed as fundamentally a Jewish prophetic book due to its deep roots in Jewish apocalyptic literature, drawing extensively from Hebrew Bible imagery, symbols, and prophecies found in texts like Daniel, Ezekiel, Isaiah, and Zechariah—such as the throne visions, beasts, seals, and the restoration of Israel—without relying on distinctly Christian doctrines beyond the messianic figure of the Lamb.

Its author, John, employs a style akin to Jewish pseudepigrapha and apocalypses, focusing on themes of divine judgment, the vindication of Israel (including the 144,000 sealed from the 12 tribes), the fall of Babylon (USA) as a corrupt empire, and eschatological renewal centered on Jerusalem and G-d's covenant people, which some scholars argue reflects a revived Jewish eschatology rather than a new Christian framework.

This perspective posits that the book's Christian label stems from later canonization, but its content and worldview align more closely with Jewish prophetic traditions, interpreting current events through a lens of Israel's ultimate triumph and G-d's sovereignty, making it less about church-specific theology and more about fulfilling ancient Jewish hopes and promises.
