

## Perimeter Ballistic Defense Barrier

# THE ZEPHYR™

Designed specifically for the public utility and critical infrastructure markets to mitigate ballistic threats to assets, the Zephyr is a louvered panel system with the following salient features:

- Ballistic capabilities up to UL Level 8
- Above grade foundation (no trenching required to avoid conflict with underground utilities or obstructions)
- Permits air flow through the barrier while denying line of sight to the asset
- Modular light weight louvers which can be removed and replaced as needed.
- Meets wind load requirements
- Ease of installation on site
- Available in heights up to 30' tall

# Protecting Your Critical Assets

We are a passionate team of security professionals that want to provide the optimum solution to CIP 14 vexing issues such as ballistic protection. Our unique and patent pending design allows critical airflow into the transformer and switchyards, while also mitigating the ballistic threat (we do blast too!)

Our design is based on both military and power utility solutions that can be utilized in most environments and locations.

Our team can assist in a turnkey approach to your security issues, from assessment to design mitigation to engineering, construction and commissioning.

The Zephyr louver system addresses the public utilities current ballistic protection needs by:

- Improving the CIP stance for ballistic protection which is a primary concern for many utility providers
- Improving the protection while maintaining the operations/maintenance
- Does not impede the operations of your switchyard or control center
