

# PRO 360 CAP

## America's Best Hydroponics & Garden Center™ presents the Pro 360 Cap

The **Pro 360 Cap** will bring the future of automation to the next level. This new system will water/feed all 6"x 6" rockwool or CoCo/Peat blocks on the market. The **Pro 360 Cap** is a hydroponic top feed cap used for precise automatic feedings and is designed for all stages of plant growth. The **Pro 360 Cap** only water/feeds precisely where water/nutrients are used or needed through very precise angles and specific locations of holes for each stage of plant growth. Designed to feed small amounts of water/nutrients multiple times per day leaving room for oxygen and pushing old nutrients down for even EC (electro-conductivity). This allows more control of the rockwool or CoCo/Peat to steer the plants towards vegetative or generative growth for a more productive plant with increased yields and a higher quality end product. The **Pro 360 Cap** is a tool designed to keep the water content in rockwool or CoCo/Peat blocks at the proper level 24/7 to produce larger bud size and weight for a more lucrative plant.

### Proudly Made in America - Patent Pending

Why the **Pro 360 Cap** is needed:

- Get bigger yields from increased nutrient uptake and availability
- Waters the center of the rockwool or CoCo/Peat block without wetting the plant's stem
- Allows more watering cycles per day (1-20) – a must with low CEC rockwool
- Waters 6"x 6" blocks 360 degrees around the stem with only one single high flow water line
- No clips needed to attach the single water line
- Designed not to clog with salt-based nutrients or organic nutrients (unlike drip emitter systems)
- Uses as little as 25ml. per feeding to allow the plant to feed as it is drying-back
- Gives more control of the water content (WC) in the rockwool or CoCo/Peat block
- Blocks out algae growth and lets oxygen in on top of the rockwool or CoCo/Peat block
- Professional/Commercial grade, built to last for years
- Sits level when used with the **Pro 360 Oxygen Pod** for even nutrient distribution and drainage
- The cap easily spreads open to go around any plant in any stage of growth
- A valuable tool for plant steering with more control of dry backs for larger crop yields
- Blocks out light not vital oxygen to promote root growth
- Pest and insect deterrent reducing the use and the cost of pesticides
- Eliminates the need and the problems associated with two water lines
- Can visually see plant being watered giving grower confidence
- Keeps rockwool or CoCo/Peat aerobic and allows roots and microbes to respire/breathe
- This automated system saves time, labor costs, money, nutrients, water and dangerous ladder time
- Can be used with hand watering/feeding if needed
- Helps eliminate root rot, crown rot, and pythium diseases from over watering and soaking the stem of the plant
- Allows plant to feed multiple times per day to bring rockwool or CoCo/Peat block up to full water capacity
- Keeps oxygen high and EC levels more stable from top to bottom to boost productivity
- Originally designed for 6"x 6" rockwool but works perfect with CoCo/Peat blocks
- Allows user to evenly water/feed with 25ml. – 900ml. to grow with more precision and control
- Connects to the **Pro 360 Water Distributor** for even nutrient distribution
- Designed to Keep the root zone perfectly moist with in-side out-side watering method
- Easy to clean and dishwasher safe
- Designed to make all nutrients work more effectively
