

THE NEW STATE OF THE ART PRO 360 HYDROPONIC TOP-FEED GROW SYSTEM

How a hydroponics store owner is creating the future of hydroponics...

This cutting edge precision irrigation system was designed and built by a dedicated 32-year cannabis grower that has been making custom hydroponic grow systems since 1989 and consulting on grow rooms since 1999.

In 2006, husband and wife team Paul and Victoria, started America's Best Hydroponics located in Palmdale, CA. From day one, Paul sold his own custom automated top-feed systems. These systems were made out of 3/4" PVC with 3/8" gromets, running to 1/4" drip lines then to 1/16" drip-stakes for rockwool blocks as well as custom round halos for buckets.

Realizing that when feeding plants with drip-stakes, the system would often clog. The water flow to each plant was different, plants were not being watered evenly and the stem of the plants were getting soaked. Other problems were algae growth inside the 3/4" PVC tubing and on the rockwool blocks as well as having to use large expensive water pumps to feed the plants.

In 2013, Paul decided to design a completely new hydroponic grow system that would resolve these problems as well as cure the difficulties associated with growing plants in rockwool blocks. His goal was to create the most reliable, effective and cost-efficient top-feed system on the market.

In June 2020, after 6 years of research and development and numerous configurations, an ultra-modern, automated top-feed grow system was created. The Pro 360 Hydroponic Top-Feed Grow System is reliable and saves time, labor, money, water and nutrients while increasing yields.

The Pro 360 Hydroponic Top-Feed Grow System creates larger, healthier, more lucrative plants by distributing nutrients to plants with greater accuracy, precision, reliability and more control than any other grow system. The system is extremely cost efficient by utilizing ultra-low pressure water pumps that are inexpensive, reliable and effective. The Pro 360 Hydroponic Top-Feed Grow System is made in the USA and patent pending.

PRO 360 CAP

The Pro 360 Cap is a hydroponic top-feed cap that works with all 6"x 6" rockwool or CoCo/Peat blocks. Precise automation of plant nutrients is key with the Pro 360 Cap. Designed for all stages of plant growth, the cap feeds precisely where water/nutrients are used or needed through precise angles and specific locations of holes for each stage of plant growth. The Pro 360 Cap will give you more control of dry-backs for a more productive, higher yielding and quality producing plant.

PRO 360 OXYGEN POD

The Pro 360 Oxygen Pod is the first in world, insulating and oxygenating housing that holds any 6"x 6" rockwool or CoCo/Peat block with or without the factory plastic wrapping. The Pro 360 Oxygen Pod eliminates algae growth and will keep the rockwool or CoCo/Peat block elevated and level providing the maximum amount of aeration and oxygen. This lets the rockwool or CoCo/Peat block dry-back quicker allowing you to water/feed small amounts of nutrients multiple times per day. When used with the Pro 360 Cap, nutrition is provided from the top down evenly, maximizing growth with increased flower production.

PRO 360 ALKALINITY/ WATER EXTRACTOR

The Pro 360 Alkalinity/Water Extractor is a time saving rockwool prepping tool that allows clones to root through any 6"x 6" rockwool block in half the time by removing excess alkalinity and stagnant water from the rockwool block. The Pro 360 Alkalinity/Water Extractor promotes faster rooting, increased oxygen levels to the rootzone, increased nutrient uptake, stable PH levels and lower alkalinity levels.

Designed to work with just the rockwool block or with the Pro 360 Oxygen Pod, the Pro 360 Alkalinity/Water Extractor removes unwanted stagnant water from overwatered 6"x 6" rockwool blocks, at any stage from clone to harvest. Can be used to check P H & E C/PPM levels in any stage.

*Cap, Pod and Extractor are patent pending. Made in the USA.

PRO 360 WATER CONTENT (WC) SCALE

The water-resistant Pro 360 Scale is a valuable tool for starting clones or seedlings all the way to harvest. The Pro 360 Scale creates the most effective method to start plants off right and can be used in any stage of plant growth to check the water content (WC) by weight of the rockwool or CoCo/Peat block. The Pro 360 Scale works perfect with the Pro 360 Cap and Oxygen Pod. This is the best tool for checking dry-back and wet-up water content by weight to keep the rockwool or CoCo/Peat blocks at the proper level 24/7.

PRO 360 WATER DISTRIBUTOR

The Pro 360 Water Distributor is a more precise way of dispersing nutrients evenly and accurately to each plant without clogging, ultimately saving time, water, nutrients, and labor costs. The solution to growing with precision irrigation is simple with these easy-to-use low pressure, high volume hydroponic watering distributors. The Pro 360 Water Distributors are available in an 8, 11, or 14 site and can be linked together to grow any number of plants. Excellent for double or triple decker systems, the Pro 360 Water Distributors with 1/4" valves allow more control of water/nutrients than any other distributor on the market. Hand made in America.
